SUBJECT: Project No: NH-0055-02(218); 106023/301000 CON

I-55 from Byram to McDowell Road
Hinds County

Dear Mr. Lobred:

We are requesting permit authorization for the subject EA project. Enclosed, please find the FHWA concurrence, maps, plans, delineations, and photos. Should it be determined that mitigation be required for any of the 340 linear feet of channel impacts, we would prefer debiting those credits out of the Red Creek Mitigation Bank in Jackson County.

Should you have any questions or need further information, please contact Ms. Andrea Wodtke.

Sincerely,

Kim D. Thurman
Environmental Division Administrator

Add 2 Lanes and Pave from Byram to McDowell Road

This project work consists of improvements to I-55 from the Byram area to McDowell Road in South Hinds County. More specifically additional lanes will be added toward the outside of the existing facility between South Siwell Road in Byram and McDowell Road in Jackson for a distance of about 6.6 miles. No wetlands were found in the project area and no new ROW will be added. As described in the enclosed Table of Impacts there are several stream channels that will be impacted by extension or rip-rap or simply left alone with no impacts. The box bridge at Trahon Creek is to be extended by at least 46 feet. We anticipate more extension footage and the use of rip-rap armor. Therefore we estimated 100 feet of extension and 100 feet of rip-rap. The affected plans are included and the Wetland Assessment has already been submitted.

Additional information about this project can be found in the EA document and Location Committee report. If any additional information is needed please let me know as soon as possible. Scheduled letting is for 1/22/2013.

FINAL COMMITTEE REPORT

The Location and Design Committee met on January 20, 2011 for consideration of the referenced project on I-55 in Hinds County. The following persons were in attendance:

Mr. Heath Patterson – Construction Division
Mr. David Seal – Roadway Design Division
Mr. Kent Reeves – District V
Mr. Alan Cross – District V
Mr. Robert Webster – FHWA
Mr. Sammy Holcomb – Planning Division
Mr. Jeff Pierce – Planning Division
Mr. Chad Wallace – Environmental Division
Mr. Andy McNair – Traffic Engineering Division
Mr. James Warren – Planning Division
Mr. Justin Walker – Bridge Division

The project under consideration begins at the Copiah/Hinds County Line at approximately Station 1364+47 (lt. lane) and extends northerly approximately 17 miles to McDowell Road at approximately Station 947+95

Original Construction

The southern end of I-55 in Hinds County was constructed as I-55 from the BOP to approximately Station 190+00 (lt. lane) between 1959 and 1961 under the following projects:

Mr. Chad Wallace
May 19, 2011
Page 2

- I-091-2(18) – Completed 1960
- I-55-2(27)74 – Completed 1961

The typical section provided for a four-lane divided facility with a pavement width of 24 ft. on a 44 ft. finish crown section. The shoulders were paved 9 ft. on the outside and 3 ft. on the median side. The median slopes were constructed on a 4:1 slope. The outside slopes were constructed on either 2:1, 3:1 or 4:1 depending on the cut/fill height. The centerline to centerline distance begins at 88' just north of the BOP and transitions to 60 ft. at Station 1455+99 (lt. lane). This 60 ft. separation continued to Station 190+00.

The pavement structure consisted of 9" Reinforced Cement Concrete over 6 inches Cement Treated Topping over 6 – 12 inches of Roadbed Topping. The shoulders were paved with DBST over 6 inches Cement Treated Roadbed Topping.

Frontage roads were constructed 81 ft. left and right of the mainline roadway beginning at Station 1427+00 on the left and Station 1454+80 on the right. The typical section provided for a two lane facility with a pavement width of 20 ft. and 5 ft. shoulders. The inside slopes were constructed as 4:1 in cuts and either 2:1, 3:1 or 4:1 in fills. The outside slopes were constructed as 4:1 in cuts and between 2:1 to 4:1 in fills. The pavement structure was DBST over 10 inches of Clay Gravel over 3 – 12 inches of Roadbed Topping.

From Station 190+00 (lt. lane) northward to the EOP, I-55 was originally constructed as US 51 between 1953 and 1960 under the following projects:

- FI-I-001-2(4) – Completed 1955
- FI-001-2(2) – Completed 1956
- F-FI-I-IN-001-2(9) – Completed 1956
- I-091-2(10) – Completed 1960
- I-091-2(5) – Completed 1959
- I-091-2(11) – Completed 1960
- I-091-2(12) – Completed 1960

This section of US 51 was constructed as a four-lane divided facility with a centerline to centerline distance of 60 feet from Station 190+00 to approximately Station 574+64. From this point northward, the depressed median transitioned to a 20 foot raised median with dowelled cycloid curb beginning at approximately station 582+08 and continued to the EOP.

In the four-lane divided section, the typical section for the north bound lanes provided for a pavement width of 24 ft. on a 44 ft. finish crown section with 10 foot granular shoulders. The southbound lanes were constructed with a pavement width of 24 ft. on a 42 finish crown. The granular shoulders were constructed 10 ft. wide on the outside and 8 ft. on the median side. The slopes were constructed between 2:1 and 4:1 depending on the fill or cut height. Median slopes were constructed as 4:1.

The raised median section was constructed on an 88 ft. finish crown with 10 ft. granular shoulders. The original structure was either 8 inches or 9 inches Uniform Reinforced Cement Concrete Pavement over 12 to 18 inches of Roadbed Topping. In some areas, stabilizer aggregate was incorporated and in other areas, soil cement was used. The outside slopes vary from 2:1 to 4:1 depending on the fill or cut height. Median slopes were constructed at 4:1.

Frontage roads were constructed at 81 feet left and right of the mainline. The slopes and pavement structure were constructed as previously discussed for the section near the BOP.

Beginning in 1979 under Project I-55-2(76) 84, the existing cycloid curb and raised median was removed. The raised median was then excavated and paved with approximately 12 ½ inches of HMA over 8 inches of chemically treated subgrade. Pre-cast concrete median barrier was then installed beginning at Station 578+10 and continuing to Station 929+08. The existing granular shoulders were also widened to 12 feet and paved 10 feet with approximately 12 inches of HMA. A SBST surface course was also placed. The existing concrete lanes were overlaid at this time with approximately 4 ½ inches of HMA.

In 2001, under Project IM-00550-2(120), this entire section of I-55 from the Copiah County Line to McDowell Road was rehabilitated with a combination of concrete grinding, milling and overlaying with HMA. The frontage roads were also overlaid with 1 ½ inches of HMA.

In 2007, under Project HSIP-0055-02(203)N, the entire length of existing precast median barrier was removed and replaced with a 42 inch cast-in-place concrete median barrier. Some additional trench drains were also installed at this time to correct some existing drainage issues in the median.

Current Pavement Condition

The current pavement consists mainly of composite pavement, but there are sections of JRCP that have not been overlaid with HMA. The largest of which begins at the Copiah County Line and extends northward approximately 1.81 miles. There are other smaller sections of bare JRCP that are less than a 0.25 miles each. The latest Roadway Condition Survey for the longest section of JRCP conducted in early 2010, indicates an average faulting of 0.20 in. at the joints.

The majority of the remaining roadway is constructed of composite pavement. The HMA overlay thickness varies from 4 to 11 inches according to data from TMIS. The HMA overlay is generally cracked and oxidized throughout the project in both directions of travel. Some areas are severely cracked, raveled and have begun to pothole. There are also areas where the pavement is distorted and out of section due to possible HVC soils. The latest Roadway Condition Survey (2010), for the composite pavement section, indicates the average rutting ranges from 0.11 to 0.15 inches.

Due to the age and condition of the existing pavement, it is the recommendation of the Committee that all of the existing pavement should be removed and replaced.

Traffic Count and Capacity Analysis

Traffic counts from the Planning Division indicate the 2010 ADT for I-55 ranges from 27,838 near the county line to 68,000 at McDowell Road. Truck percentages range from 10 – 20 %. A Capacity Analysis conducted by the Planning Division also indicates that between the Byram Interchange and McDowell Road, I-55 is currently operating at a LOS that ranges from D to F indicating an immediate need for additional lanes. Without these additional lanes, the LOS drops to F for the entire section by the year 2040.

Construction Alternates

Two alternates were considered by the Committee. All alternates begin at the Copiah County Line and end at McDowell Road. They are described as follows:

Alternate "A" : This is the No Build Alternate and is not considered to be a prudent alternate. It does not provide a desirable LOS and does not address any of the current pavement deficiencies.

Alternate "B" : This alternate would provide for the addition of one lane in each direction from the Byram Interchange to McDowell Road. Due to the existing concrete median barrier, these additional lanes would be constructed to the outside of the existing lanes. This alternate also provides for the addition of one lane in each direction from the Terry Interchange to the Byram Interchange. The Capacity Analysis did not indicate the immediate need for additional lanes in this section, however, one additional lane in each direction will be required for traffic control purposes. These additional lanes will be added by a combination of widening to the median side and also to the outside. Construction of a median barrier will be necessary between Terry and Byram. From the County Line to Terry, additional lanes are not required and the existing pavement will be removed and replaced under single lane closures. Analysis completed by the Planning Division indicates this can be accomplished with minimal traffic backup.

Traffic Control

With reference to the Committee's recommendation to remove and replace the existing pavement, several traffic control concepts were looked at by the Committee.

- Utilization of Frontage Roads – Since two-way frontage roads parallel the majority of the project, the possibility of placing I-55 traffic on the frontage roads was reviewed. This concept was rejected due to the poor vertical geometry of the frontage roads, the lack of suitable shoulders, the number of businesses located on the frontage roads and the presence of the interchanges.
- Utilization of Long Term Lane Closures - Planning Division completed an analysis to determine if this work could be performed under long term lane closures by reducing I-55 to one lane during construction. The results of that analysis showed that from the BOP to Terry, removal and replacement of the existing pavement could be completed under long term lane closures without undue traffic backups. From Terry to Wynndale, this analysis indicated that construction traffic volumes will exceed capacity and queues up to 2.3 miles could be expected. From Wynndale to Byram, the analysis calculated that queues up to 4.1 miles could be expected. For these reasons, the Committee recommends this method between the BOP and Terry and rejects this concept for all other areas.
- Head-to-Head Traffic with Median Barrier
 - Terry to Byram – Under this concept, the existing median will be paved to accommodate 2 lanes of traffic. Due to the narrow width of the median, some additional widening may be required on the outside. One direction of travel (2 lanes) will be moved into the paved median separated from the opposing traffic by a concrete median barrier while the ultimate 3-lane section is constructed. The process will then be repeated to allow construction of the remaining lanes.
 - Byram to McDowell – In this section, the southbound lanes will be widened by adding an outside lane and a 14 foot outside shoulder. All four lanes will be head-to-head separated by a median barrier while the ultimate northbound 3 lanes with full depth shoulders are constructed. Once completed, all four lanes of traffic will be shifted to the completed northbound lanes while the remaining two lanes of the southbound lanes are removed and replaced.

The Committee recommends the Head-to-Head method of traffic control be utilized between Terry and McDowell Road. The Committee also recommends keeping the existing 42" concrete median intact. Sections of the existing barrier may be removed as necessary to accommodate ramp traffic during construction phasing.

Bridges

There are 8 overhead bridges, 6 mainline bridges and 3 box culverts located within the project limits. Bridge numbers, vertical clearances, curb to curb widths, year of construction and sufficiency rating are tabulated and attached to this report. The Committee notes that many of them do not have sufficient vertical clearance. During the Committee meeting, it was noted by the Bridge Division that due to the shallow footing depth at the bridge columns and the median barrier, lowering of the roadway profile to improve the vertical clearance may not be possible. It is the recommendation of the Committee that the vertical clearance of each bridge should be investigated during the design phase to increase this to a minimum of 17 feet where possible. A design exception will be required for those bridges whose vertical clearance cannot be increased.

The Committee also noted that during the construction phasing when traffic is all on the southbound or northbound lanes, the horizontal clearance underneath the overhead bridges will be narrow. Preliminary measurements indicate there is room for 4 lanes. The Committee recommends further investigation during the design phase to verify the horizontal clearance.

Widening of mainline bridges to accommodate the additional lanes and/or traffic phasing will be required. Subsequent to the Committee meeting, it has been determined that the McDowell Road bridge will also require widening. At the minimum, one additional lane will be added to the northbound lanes. Other work, such as replacing bridge railing, removing median curb, replacing sign trusses, and reworking of the ramps on the north side may be required and will be determined during design phase.

Frontage Roads

In general, no work will be performed on the frontage roads under this project. However, the Committee notes that due to the close proximity of the frontage roads and the differences in elevation between the frontage roads and the mainline in certain locations, it may be necessary to adjust the profile of the frontage road to allow the additional lanes to be constructed. If the frontage road profile cannot be adjusted in these areas due to lack of ROW or ROW impacts, the Committee recommends that retaining walls should be utilized where practical.

Signage

The Traffic Engineering Division has recommended that all signing be replaced and, within the limits of the proposed 6 lane facility, existing ground mounted signage should be replaced with overhead signs.

Roadside Safety

- The Committee recommends removing and replacing all guardrail and guardrail terminal end sections in accordance with current MDOT/FHWA safety requirements. The Committee also recommends removing guardrail located adjacent to overpass bridge columns which do not have the correct deflection distance between the back of the guardrail posts and the bridge columns for the existing type of rail and post spacing. An upgraded section of rail and post spacing or concrete barrier will be used at these locations. Location and type of rail will be determined during plan development.

Mr. Chad Wallace
May 19, 2011
Page 6

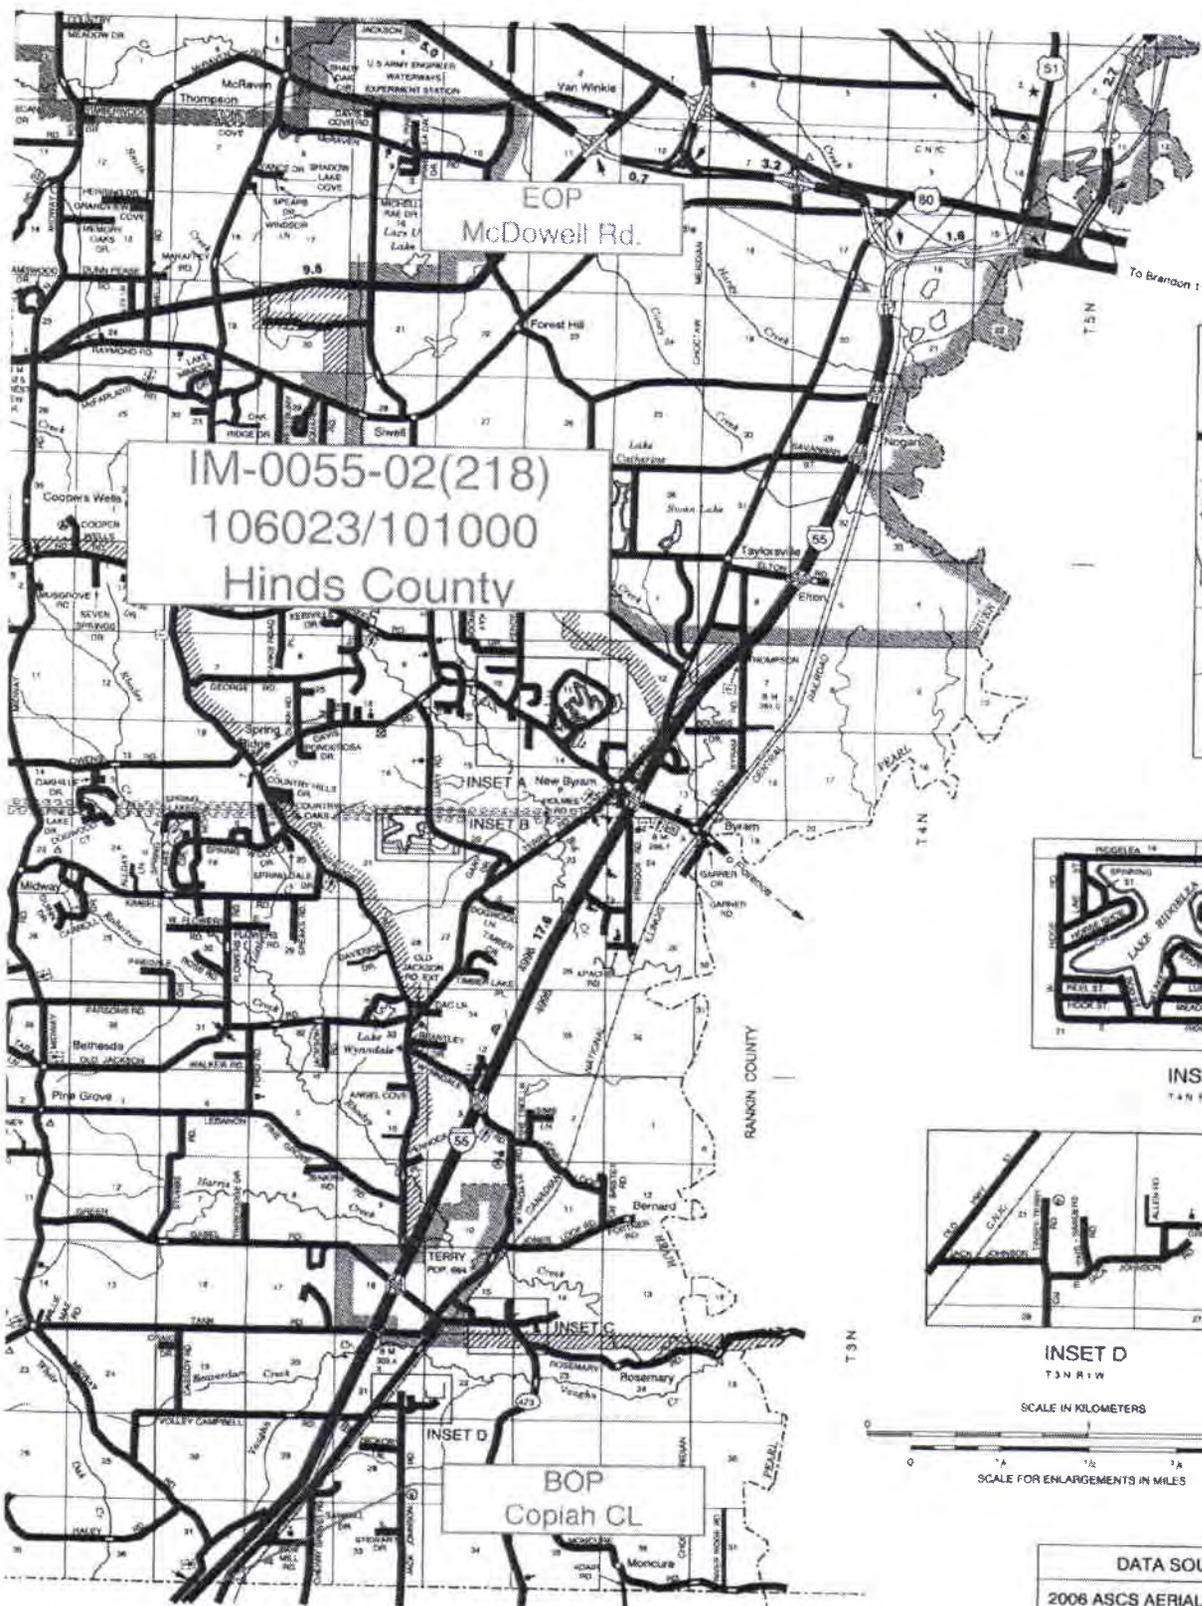

- Guardrail will be installed for drainage structures (box culverts) with an opening equal to or greater than 48 sf that may exist in the 30' roadside safety distance as described in Subsection 11-3 02 06 of the *Roadway Design Manual*, 2001 Edition. Drainage structures with less than 48 sf of opening should be extended beyond the 30' roadside safety distance.
- Random Clearing may be required on the southern end of this project where the frontage roads have veered away from the mainline. The Committee recommends that Random Clearing should be set up to remove vegetation along the project for a minimum distance of 50 feet from the edge of pavement or as directed by MDOT policy, whichever is greater. Grassing items should be set up for areas requiring Random Clearing.
- Delineators on the project will be removed or replaced per current MDOT design standards or policy.
- All interchange ramps on the project will be extended where necessary to meet the current parallel acceleration/deceleration design configuration. Where possible, the side slope construction along these ramp extensions should be at least 4:1 or flatter.
- All ditch plugs and authorized crossovers will be brought to current 3R safety design standards. This will include flattening longitudinal slopes to 10:1 or flatter and will require extending some median pipes and/or adding median inlets to meet existing field conditions. Some paved ditch, apron and inlet removal and replacement may also be required in order to flatten the slopes.

All work on this project will be inside existing right-of-way; therefore the Farmland Protection Act does not apply.

No filling of wetlands will be required.

* Value Engineering Study Recommended Yes No

Commitments/Requirements	Source of Commitment	Responsible Office	Place on Plans	Requires A Special Provision	Status of Commitment/Requirement
Access to businesses and residences will be maintained during construction, and traffic will be adequately and safely maintained.	Minimization of social/community impacts Section 4.3 – Community & Social Impacts	Construction	No	No	Construction
A public meeting will be held to present conceptual renderings of noise barriers, to discuss locations, and to allow public input	Minimization of noise impacts Section 4.10-Noise	Roadway Design Environmental	Yes	No	Pre-construction
Best Management Practices (BMPs) will be utilized to prevent soil erosion and control sediment-laden stormwater run-off.	Minimization of impacts to water quality and streams Section 4.11 - Water Quality Section 4.12 - Streams Section 4.15 – Wildlife	Roadway Design Construction	Yes	No	Pre-construction Construction
Where possible, stream and floodplain crossings will be perpendicular. Appropriately sized bridges and embedded culverts will be used to accommodate unimpeded base and flood flows and passage of aquatic and terrestrial species.	Minimization of impacts to floodplains, aquatic & terrestrial habitat. Section 4.12 – Streams Section 4.16-Floodplains	Bridge Design Roadway Design	Yes	No	Pre-construction
Bridge hydraulic analyses will be conducted to certify that the proposed project will satisfy “no net-rise” in the associated floodplains.	Minimization of impacts to floodplains Section 4.16-Floodplains	Bridge Design Roadway Design	Yes	No	Pre-construction
Best Management Practices (BMPs) will be utilized to prevent soil erosion and control sediment-laden stormwater run-off	Minimization of impacts to threatened & endangered species Section 4.20-T&E Species	Roadway Design Construction	Yes	No	Pre-construction Construction

<p>If archaeological sites are found or are suspected during construction of the proposed project, (1) construction activities will immediately cease, (2) the suspected area will be protected from further disturbance, and (3) the M/DOT Archaeologist will be contacted at (601) 359-1475 for further instruction.</p>	<p>Impacts to cultural resources Section 4.21 – Cultural Resources Section 5.3 – Native American Consultation</p>	<p>Construction</p>	<p>No</p>	<p>No</p>	<p>Construction</p>
--	---	---------------------	-----------	-----------	---------------------

All practical and standard procedures and measures, including Best Management practices will be implemented to avoid or minimize impacts.

- These commitments should be carried throughout each phase of the project development including Design, Right of Way, Construction, and Maintenance.
- *Value Engineering (VE) Studies are recommended for projects on the NHS System and/or an Intermodal Connector with an estimated project costs approaching \$25 Million

FISH AND WILDLIFE SERVICE
Mississippi Field Office
6578 Dogwood View Parkway, Suite A
Jackson, Mississippi 39213

August 18, 2011

Mr. John Farmer
Florence & Hutcheson
1989 Oak Tree Cove, Suite A
Hernando, Mississippi 38632

Dear Mr. Farmer:

The Fish and Wildlife Service (Service) has reviewed the information in your letter dated August 1, 2011, regarding the proposed improvements to I-55 from Copiah County line to McDowell Road in Hinds County in Mississippi. Our comments are submitted in accordance with the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.).

Based on the information you provided, the Service concludes that there are no federally listed threatened or endangered species or their critical habitat within the vicinity of the proposed project. No further consultation with this office is required unless there are changes in the scope or location of the proposed project.

If you have any questions, please contact Sandra Kilpatrick at our office, telephone: (601) 321-1135.

Sincerely,

for Stephen M. Ricks
Field Supervisor
MS Field Office

Re: Proposed Improvements to I-55 from
Copiah County Line to McDowell Road
Hinds County, Mississippi

R# 8489
FMS 106023-IM-0055-02(218)

To John Farmer:

In response to your request for information dated August 1, 2011, we have searched our database for occurrences of state or federally listed species and species of special concern that occur within 2 miles of the site of the proposed project. Please find our concerns and recommendations below.

The following species of concern may occur within 2 miles of the proposed project area:

SCIENTIFIC NAME	COMMON NAME	FED	STATE	STATE RANK
<i>Uniomerus declivis</i>	Tapered Pondhorn			S2
<i>Truncilla truncata</i>	Deertoe			S3
<i>Lasmigona complanata</i>	White Heelsplitter			S3
<i>Obovaria unicolor</i>	Alabama Hickorynut			S1

State Rank

S1 — Critically imperiled in Mississippi because of extreme rarity (5 or fewer occurrences or very few remaining individuals or acres) or because of some factor(s) making it vulnerable to extirpation.

S2 — Imperiled in Mississippi because of rarity (6 to 20 occurrences or few remaining individuals or acres) or because of some factor(s) making it vulnerable to extirpation.

S3 — Rare or uncommon in Mississippi (on the order of 21 to 100 occurrences).

State and Federal Status

LE Endangered — A species which is in danger of extinction throughout all or a significant portion of its range.

LT Threatened — A species likely to become endangered in foreseeable future throughout all or a significant portion of its range

Based on information provided, we conclude that if best management practices are properly implemented, monitored, and maintained (particularly measures to prevent, or at least, minimize negative impacts to water quality), the proposed project likely poses no threat to listed species or their habitats.

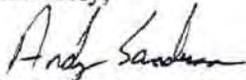

Recommendations:

We recommend that best management practices be properly implemented, monitored, and maintained for compliance, specifically measures that will prevent suspended silt and contaminants from leaving the site in stormwater run-off as this may negatively affect water quality and habitat conditions within nearby streams and waterbodies.

In addition, portions of this project site are underlain by hydric soils and there will be multiple stream crossings. If this project is approved, we ask that serious consideration be given to the cumulative impacts of wetland/stream disturbance and elimination, and that appropriate in-kind mitigation be provided.

Please feel free to contact us if we can provide any additional information, resources, or assistance that will help minimize negative impacts to the species and/or ecological communities identified in this review. We are happy to work with you to ensure that our state's precious natural heritage is conserved and preserved for future Mississippians.

Sincerely,

Andy Sanderson, Ecologist
Mississippi Natural Heritage Program
(601) 354-7303

The Mississippi Natural Heritage Program (MNHP) has compiled a database that is the most complete source of information about Mississippi's rare, threatened, and endangered plants, animals, and ecological communities. The quantity and quality of data collected by MNHP are dependent on the research and observations of many individuals and organizations. In many cases, this information is not the result of comprehensive or site-specific field surveys; most natural areas in Mississippi have not been thoroughly surveyed and new occurrences of plant and animal species are often discovered. Heritage reports summarize the existing information known to the MNHP at the time of the request and cannot always be considered a definitive statement on the presence, absence or condition of biological elements on a particular site.

CONSULTING ENGINEERS

September 1, 2011

Mr. Rogerick Thompson
District Conservationist
Natural Resource Conservation Service
US Department of Agriculture
322 New Market Drive
Jackson, MS 39209

**Re: Proposed Improvements to I-55 from Copiah County Line
to McDowell Road
FMS 106023-IM-0055-02(218)
Hinds County, Mississippi**

Dear Mr. Thompson:

The Mississippi Department of Transportation (MDOT) is proposing improvements to Interstate 55 from the Copiah County Line northward to McDowell Road in Hinds County, Mississippi. The project is positioned immediately south of Jackson, Mississippi and is approximately 17 miles in length. MDOT is currently conducting preliminary engineering and environmental studies for the proposed project. Florence & Hutcheson (F&H) has been assigned to assist with these tasks.

The purpose of the project is to (1) improve roadway conditions throughout the reach of the project and (2) construct additional lanes from Terry Road to McDowell Road to relieve congestion for this portion of the interstate system. MDOT does not anticipate the acquisition of right-of-way for this project. Consideration will be given to utilizing the existing alignment with necessary attention given of potential impacts, future traffic volumes, constructability, and maintenance of traffic.

Since federal monies will be utilized for the project, compliance with the National Environmental Policy Act (NEPA) of 1969 is required. F&H respectfully requests that you provide information on your agency's relevant interests under the Farmland Protection Policy Act (FPPA) as well as conservation programs under NRCS administration within the study area as we initiate the work toward the completion of an Environmental Assessment (EA). Please find attached maps of the proposed project location for your use in review of the project.

If you have questions or concerns, please contact me at (615) 867-9400 or Mr. Chad Wallace of the Mississippi Department of Transportation at (601) 359-7920. You may also email your concerns to me at jfarmer@flohut.com or Mr. Wallace at rcwallace@mdot.state.ms.us.

Sincerely,

FLORENCE & HUTCHESON

John L. Farmer, PE, CPESC
Senior Environmental Engineer

Jackson, MS 39225

Dear Ms. Fisher:

On behalf of the Mississippi Department of Transportation (MDOT) and the Federal Highway Administration (FHWA), we submitted a Letter of Interest (LOI) to your attention on August 1, 2011 concerning the proposed improvements to I-55 from the Copiah County Line to McDowell Road south of Jackson in Hinds County, MS.

Since federal monies will be utilized for the project, compliance with the National Environmental Policy Act (NEPA) of 1969 is required. We requested that you provide information on your agency's relevant interests within the study area as we work toward the completion of an *Environmental Assessment (EA)*.

If we do not receive a written response to the LOI by September 19, 2011, we will consider that your agency has no comments or concerns prior to the availability of the *Draft Environmental Assessment*. We have provided the original letter below.

Sincerely,

John L. Farmer, PE, CPESC
Sr. Environmental Engineer
FLORENCE & HUTCHESON

No response as of 10-15-12. *AW*

RE: Preliminary Environmental Assessment for Proposed Improvements to I-55 from
Copiah County Line to McDowell Road (FMS 106023-IM-0055-02(218))
MDAH Project Log #08-024-11, Hinds County

Dear Mr. Farmer:

We have reviewed your request for comment for the preliminary environmental assessment of the above referenced project, received August 3, 2011, in accordance with our responsibilities under Section 106 of the National Historic Preservation Act and 36 CFR Part 800. After review, it is our determination that the project may have an effect on cultural resources. As such, we ask that you evaluate the potential impact of the project to cultural resources and allow us to comment on any architectural and archaeological survey work performed in association with this project.

If you have any questions or concerns, please contact me at 601-576-6940.

Sincerely,

A handwritten signature in cursive script, appearing to read 'Greg Williamson'.

RE: EPA Comments on the Draft Environmental Assessment (Draft EA) for Interstate 55
From the Copiah County Line South of Terry, MS to McDowell Road in Jackson, MS
Project Number: IM-0055-02 (218)

Dear Ms. Thurman:

The U.S. Environmental Protection Agency (EPA) has reviewed the subject draft Environmental Assessment (EA) pursuant to the National Environmental Policy Act (NEPA) and Section 309 of the Clean Air Act. The purpose of this letter is to provide you with EPA's comments regarding potential impacts of the proposed project.

The Mississippi Department of Transportation (MDOT) proposes to improve Interstate 55 from Copiah County Line south of Terry, MS to McDowell Road in Jackson, MS. The proposed project would involve: (1) replacing pavement from Copiah County Line south of Terry, MS to McDowell Road in Jackson, MS (17.1 miles); (2) adding one lane in each direction from Terry, MS (Green Gable Road, Cunningham Avenue) to Byram, MS (S. Siwell Rd.) for 6.3 miles; and (3) adding one lane in each direction from Byram, MS (S. Siwell Rd.) to Jackson, MS (McDowell Rd.) for 6.6 miles. All improvements are proposed within the existing interstate and frontage roads rights-of-way.

The purpose of the project is to improve the physical roadway conditions of I-55 from the Copiah County Line south of Terry, MS to McDowell Road in Jackson, MS within Hinds County and provide additional capacity for I-55 from Green Gable Road/Cunningham Avenue in order to relieve congestion of the interstate system and provide fluid and safe traffic control during the pavement replacement.

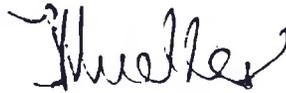

The alternatives considered include a No-Build Alternative (Alternative A) and two Build Alternatives (B and C). According to the Draft EA, Alternative A does not satisfy the purpose and need of the project. Of the two build alternatives, Alternative B involves additional property outside of MDOT's existing right-of-way while Alternative C utilizes MDOT's existing right-of-way. EPA notes that the Draft EA identifies Alternative C as the preferred alternative.

Based on the information provided in the Draft EA, EPA supports the selection of Alternative C as the environmentally preferable alternative. The preferred alternative does not

appear to represent a significant impact to human health and the environment since it constrains the project within the existing right-of-way. Constraining the project within MDOT's existing right-of-way minimizes the social, economic, and environmental impacts of the project while meeting the project purpose and need. In an effort to further reduce water resource and noise impacts, EPA is providing detailed comments for your consideration. Our detailed comments are enclosed.

We appreciate the opportunity to review and comment on the proposed action and look forward to reviewing the Final EA. If you have any questions about our comments, please contact Kenneth Dean at (404) 562-9378.

Sincerely,

A handwritten signature in cursive script, appearing to read "H. Mueller".

Heinz J. Mueller, Chief
NEPA Program Office
Office of Policy and Management

Enclosure

**EPA Review and Comments on
Draft Environmental Assessment (EA) for Interstate 55
From the Copiah County Line South of Terry, MS to McDowell Road in Jackson, MS
Project Number: IM-0055-02 (218)**

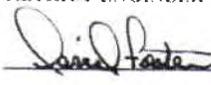

Stream Impacts: According to the Draft EA, 10,255 linear feet of streams are expected to be impacted by the proposed project due to stream alterations. It appears that these stream alterations are associated with the construction of the additional lanes and widening of the mainline bridges and culverts. EPA recommends that the Final EA discuss the stream alterations that will occur. EPA further recommends that any stream impacts be compensated with stream mitigation.

Water Quality Impacts: Page 48 of the Draft EA states, "The only impaired stream within the Pearl River Basin and also in Hinds County is Lynch Creek" It should be clarified that Lynch Creek is the only impaired stream in Hinds County still requiring a TMDL. According to EPA's TMDL database, TMDLs have been established for Big Creek (MS159E), Rhodes Creek (MS161E), and Pearl River (MSUMPRLR1E), which are within the Pearl River Basin and also in Hinds County. These waterbodies are impaired, but they are not on the Section 303(d) List because TMDLs have been developed to address the impairments.

The Draft EA acknowledges "the recommended Sediment TMDL for waterbodies within the proposed project area." It should be specifically noted that sediment TMDLs exist for Big Creek (MS159E), Rhodes Creek (MS161E), and Pearl River (MSUMPRLR1E). The Draft EA generally discusses benefits of best management practices (BMPs) and measures to be implemented during the construction phase of the proposed project to minimize water quality impacts. EPA recommends that MDOT analyze and provide information in the Final EA regarding the potential sediment loading due to the proposed project and the estimated reductions in sediment loads that might result from the implementation of BMPs.

Noise Impacts: The Draft EA states that at 163 facilities, traffic noise impacts are expected to occur in the design year (2031) if the proposed project is constructed. Based on model results, noise barriers are likely feasible and reasonable for only two (Area E and Area G) of the seven noise sensitive areas. EPA understands that a noise barrier may be considered in Area F since the cost per benefit is only slightly more than the maximum allowable for "reasonableness". Since noise walls have been determined "not reasonable" for five of the seven noise sensitive areas, then other measures such as vegetative barriers and earthen berms should be considered to minimize impacts to sensitive receptors. EPA encourages MDOT to analyze the use of vegetative barriers and earthen berms and discuss their reasonableness and feasibility.

CHANNEL ASSESSMENT REPORT

I-55 from the Copiah County Line to McDowell Road

Hinds County, MS

Project Number IM-0055-02(218)

FMS Number 106023

Prepared by
John L. Farmer, PE, CPESC
Florence & Hutcheson

August 30, 2011

Executive Summary

Florence & Hutcheson, Inc. (F&H) was retained by the Mississippi Department of Transportation (MDOT) to conduct a hydrologic survey in an area within the rights-of-way for proposed improvements to a 17.1-mile stretch of I-55 and associated frontage roads in Hinds County, Mississippi. The project is Mississippi Department of Transportation IM-055-02 (218) 106023. The project consists of improvements to I-55 through (1) pavement replacement within the entire 17.1-mile project length between the Copiah County Line south of Terry, Mississippi and McDowell Road in Jackson, Mississippi and (2) additional lane construction between Green Gable Road/W. Cunningham Avenue in Terry, Mississippi and McDowell Road for a distance of 12.9 miles. Additional lanes will be constructed toward the existing median between W. Cunningham Avenue in Terry, Mississippi and S. Siwell Road in Byram, Mississippi for a distance of 6.3 miles. Additional lanes will be constructed toward the outside of the existing facility between S. Siwell Road in Byram, Mississippi and McDowell Road in Jackson, Mississippi for a distance of 6.6 miles. The hydrologic survey commenced at the termini located at the Copiah County Line, progressed in the northerly direction into Hinds County, ending at McDowell Road in Jackson, Mississippi for a distance of 17.1 miles. Wetlands are classified as palustrine emergent, palustrine shrub-scrub or palustrine forested. Channelized resources are classified as perennial, intermittent, and ephemeral resources (drainage ditches; drainage swales; pond drains; wetland drains; or erosional features). These areas should be considered potentially jurisdictional until concurrence is given by a representative of the US Army Corps of Engineers.

Chapter 1. Introduction

The purpose of this report is to identify and describe potentially jurisdictional resources within the project corridor and to assess impacts for the purposes of regulation under Section 404 of the Clean Water Act (CWA) and/ or Section 10 of the Safe Rivers and Harbors Act of 1899 (RHA). The hydrologic survey was conducted by John L. Farmer, PE, CPESC of Florence & Hutcheson. Field work was completed on August 5, 2011. This report facilitates MDOT's efforts to document potential jurisdictional resources for review by regulatory authorities and to avoid or minimize the resources during the design process.

The hydrologic survey commenced at the termini located at the Covich County Line, progressed in the northerly direction into Hinds County, ending at McDowell Road in Jackson, Mississippi for a distance of 17.1 miles. The project consists of improvements to I-55 through (1) pavement replacement within the entire project length and (2) additional lane construction between Green Gable Road/W. Cunningham Avenue in Terry, Mississippi and McDowell Road in Jackson, Mississippi for a distance of 12.9 miles. Additional lanes will be constructed toward the existing median between Green Gable Road/W. Cunningham Avenue in Terry, Mississippi and S. Siwell Road in Byram, Mississippi for a distance of 6.3 miles. Additional lanes will be constructed toward the outside of the existing facility between S. Siwell Road in Byram, Mississippi and McDowell Road in Jackson, Mississippi for a distance of 6.6 miles. Historically, the project alignment falls within the following Sections/Townships/Ranges: S21/T3N/R1W, S16/T3N/R1W, S9/T3N/R1W, S10/T3N/R1W, S34/T4N/R1W, S26/T4N/R1W, S23/T4N/R1W, S13/T4N/R1W, S7/T4N/R1E, S6/T4N/R1E, S5/T4N/R1E, S32/T5N/R1E, S20/T5N/R1E, and S21/T5N/R1E. The project has been divided into nine sites (Sites 1-9) dividing the project between the termini. Bridges will be expanded as required and culverts/drainage structures will also be constructed, removed, and/or replaced as part of the roadway construction. The subject project will be constructed within existing rights-of-way. See Figures 1, 2, 3 for more detailed location information.

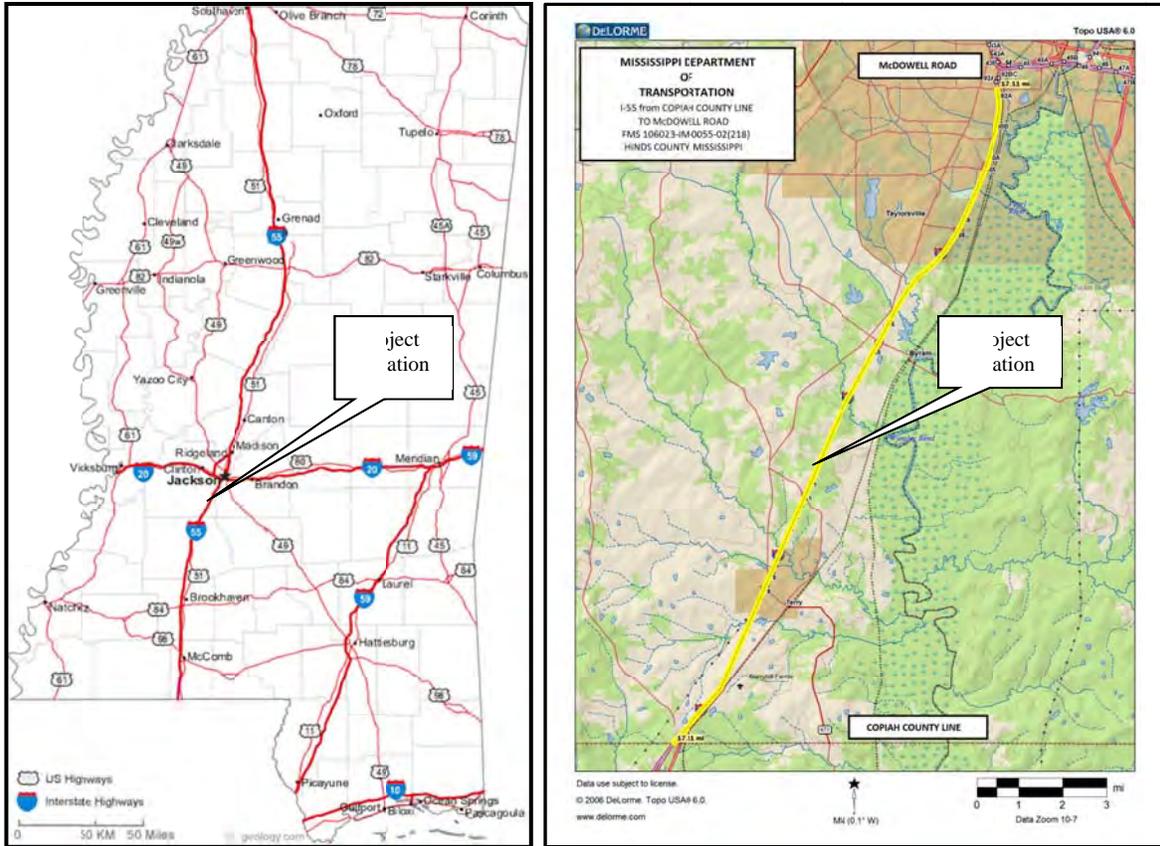

Figure 1. State and County Maps.

Figure 2. Aerial Photography for project area.

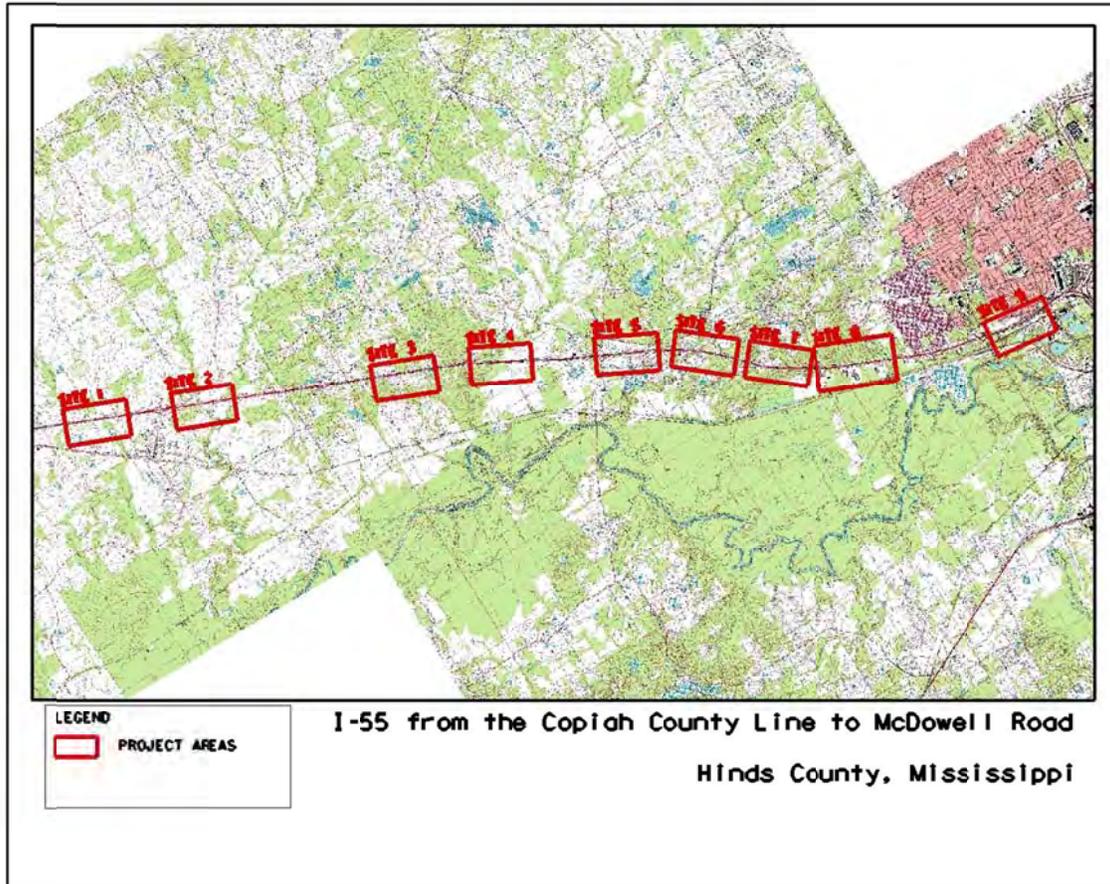

Figure 3. USGS Topographic Map for project area.

Chapter 2. Methods

This chapter summarizes the methods used to comply with MDOT, federal, state, and local guidance. Please see Appendix A for further details of methods used in this report.

Prior to initiation of field work, information was gathered from U.S. Fish and Wildlife Service National Wetland Inventory Maps, the U.S. Department of Agriculture- Natural Resource Conservation Service Web Soil Survey Maps, U.S. Geological Survey topographic mapping, and aerial photography. See Appendix C for maps showing soils, topography, and the wetland inventory. Site visits were conducted on August 4-5, 2011 to record relevant data on potentially jurisdictional resources for the purposes of CWA permitting purposes.

The project consists of improvements to I-55 through (1) pavement replacement within the entire project length and (2) additional lane construction between Green Gable Road/W. Cunningham Avenue in Terry, Mississippi and McDowell Road in Jackson, Mississippi for a distance of 12.9 miles. Additional lanes will be constructed toward the existing median between W. Cunningham Avenue in Terry, Mississippi and S. Siwell Road in Byrum, Mississippi for a distance of 6.3 miles. Additional lanes will be constructed toward the outside of the existing facility between S. Siwell Road in Byrum, Mississippi and McDowell Road in Jackson, Mississippi for a distance of 6.6 miles. Potentially jurisdictional areas near proposed work were assessed during the site visit and are described in this document.

Any wetland determinations were made using observable vegetation, hydrology, and soils in accordance with the routine approach described in the *USACE Wetland Delineation Manual (1987)* and the *Interim Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Atlantic and Gulf Coastal Plain Region (2008)*. No wetlands were observed within the proposed project area.

Other Waters Data Sheets were completed for each potential jurisdictional channel resource in the project area. Locations for these resources are marked with a “CA” (Channel Assessments). Photographs were taken at each channel assessment site.

After field work was completed, potentially jurisdictional areas were mapped and areas and lengths were calculated.

Chapter 3. Existing Conditions

Based upon the site inspections, twenty-six channelized resources (10,255 feet within the existing rights-of-way) are found in the study corridor. Channelized resources are classified as perennial, intermittent, or ephemeral resources (drainage ditches; drainage swales; pond drains; wetland drains; or erosional features). All potential jurisdictional areas should be considered preliminary prior to confirmation by the U.S. Army Corps of Engineers Regulatory Branch. Findings are detailed in Table 1.

Landscape Setting

Terrain in the project area is within the floodplain of the Pearl River (USGS HUC # 03180002). The project is located in Major Land Resource Area 133A (Southern Coastal Plain) within the South Atlantic and Gulf Slope Cash Crops, Forest, and Livestock Region (P) as described by the U.S. Department of Agriculture-Natural Resource Conservation Service. The dominant land uses along the existing I-55 are agricultural, commercial, and interstate/frontage road rights-of-way. Appendix C includes Soil Survey Data and National Wetland Inventory mapping.

Hydrology

The site visits for the subject project were conducted on August 4-5, 2011. Recorded rainfall for Jackson, Mississippi indicated a 0.26-inch rain event on July 27-28, 2011. According to historic rainfall records for Hinds County, Mississippi, the average monthly rainfall for the period 1971-2000 is 3.84” in July. In 2011, the recorded monthly rainfall total in Jackson, Mississippi is 3.31” in July. Therefore, historically, the site visits were conducted following an historically dry July. As a result of the “drier than normal period”, water in tributaries was assumed to be below the observable Ordinary High Water Mark (OHWM).

Of the twenty-six channelized resources, nine exhibited flow during the site visits. Pools were found in thirteen of the resources. The remaining four channelized resources were dry.

Vegetation

Dominant plant species were not recorded since there were no wetland areas noted within the project area.

Soils

Majority soils found in the project area are mapped as: Grenada silt loam, 2-5% slopes (GrB); Loring silt loam, 2-5% slopes, eroded (LoB2); Oaklimeter silt loam (Oa); Providence silt loam, 5-8% slopes, eroded (PoC2); Providence silt loam, 8-15% slopes, eroded (PoD2); Providence-Smithdale complex, 8-20% slopes (PrE); and Siwell silt loam, 5-8% slopes, eroded (SeC2). Oaklimeter silt loam (Oa); Providence silt loam (PoC2); Providence silt loam (PoD2); Providence-Smithdale complex (PrE); and Siwell silt loam (SeC2) are classified as hydric by the USDA NRCS. For more information, see the Datasheets in Appendix B and Soil Reports in Appendix C.

Wetlands, Ponds and Channelized Resources Summary

No wetlands or ponds were noted within the project area. The channelized resources noted during the site visits are summarized in Table 1.

Table 1. Channel Assessment Table

*Lengths include pipes, culverts, and bridges

Chapter 4. Impacts

Based upon the site inspections, twenty-six channelized resources (10,255 feet within the project area) are found within or in the vicinity of the study area. All potential jurisdictional areas should be considered preliminary prior to confirmation by the U.S. Army Corps of Engineers Regulatory Branch. Impacts to other waters will be quantified when potential jurisdictional resources have been confirmed and final design plans are available.

Appendix C — Background Information

USDA NRCS Web Soil Survey

USFWS National Wetland Inventory Map

Soil Map—Copiah County, Mississippi, and Hinds County, Mississippi
(I-55)

MAP LEGEND

 Area of Interest (AOI)	 Very Stony Spot
 Soils	 Wet Spot
 Area of Interest (AOI)	 Other
 Soil Map Units	Special Line Features
Special Point Features	 Gully
 Blowout	 Short Steep Slope
 Borrow Pit	 Other
 Clay Spot	Political Features
 Closed Depression	 Cities
 Gravel Pit	Water Features
 Gravelly Spot	 Streams and Canals
 Landfill	Transportation
 Lava Flow	 Rails
 Marsh or swamp	 Interstate Highways
 Mine or Quarry	 US Routes
 Miscellaneous Water	 Major Roads
 Perennial Water	 Local Roads
 Rock Outcrop	
 Saline Spot	
 Sandy Spot	
 Severely Eroded Spot	
 Sinkhole	
 Slide or Slip	
 Sodic Spot	
 Spoil Area	
 Stony Spot	

MAP INFORMATION

Map Scale: 1:6,930 if printed on A size (8.5" x 11") sheet.
The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.
Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for accurate map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>
Coordinate System: UTM Zone 15N NAD83

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Copiah County, Mississippi
Survey Area Data: Version 12, Jul 8, 2010
Soil Survey Area: Hinds County, Mississippi
Survey Area Data: Version 10, Jul 8, 2010

These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Date(s) aerial images were photographed: Data not available.

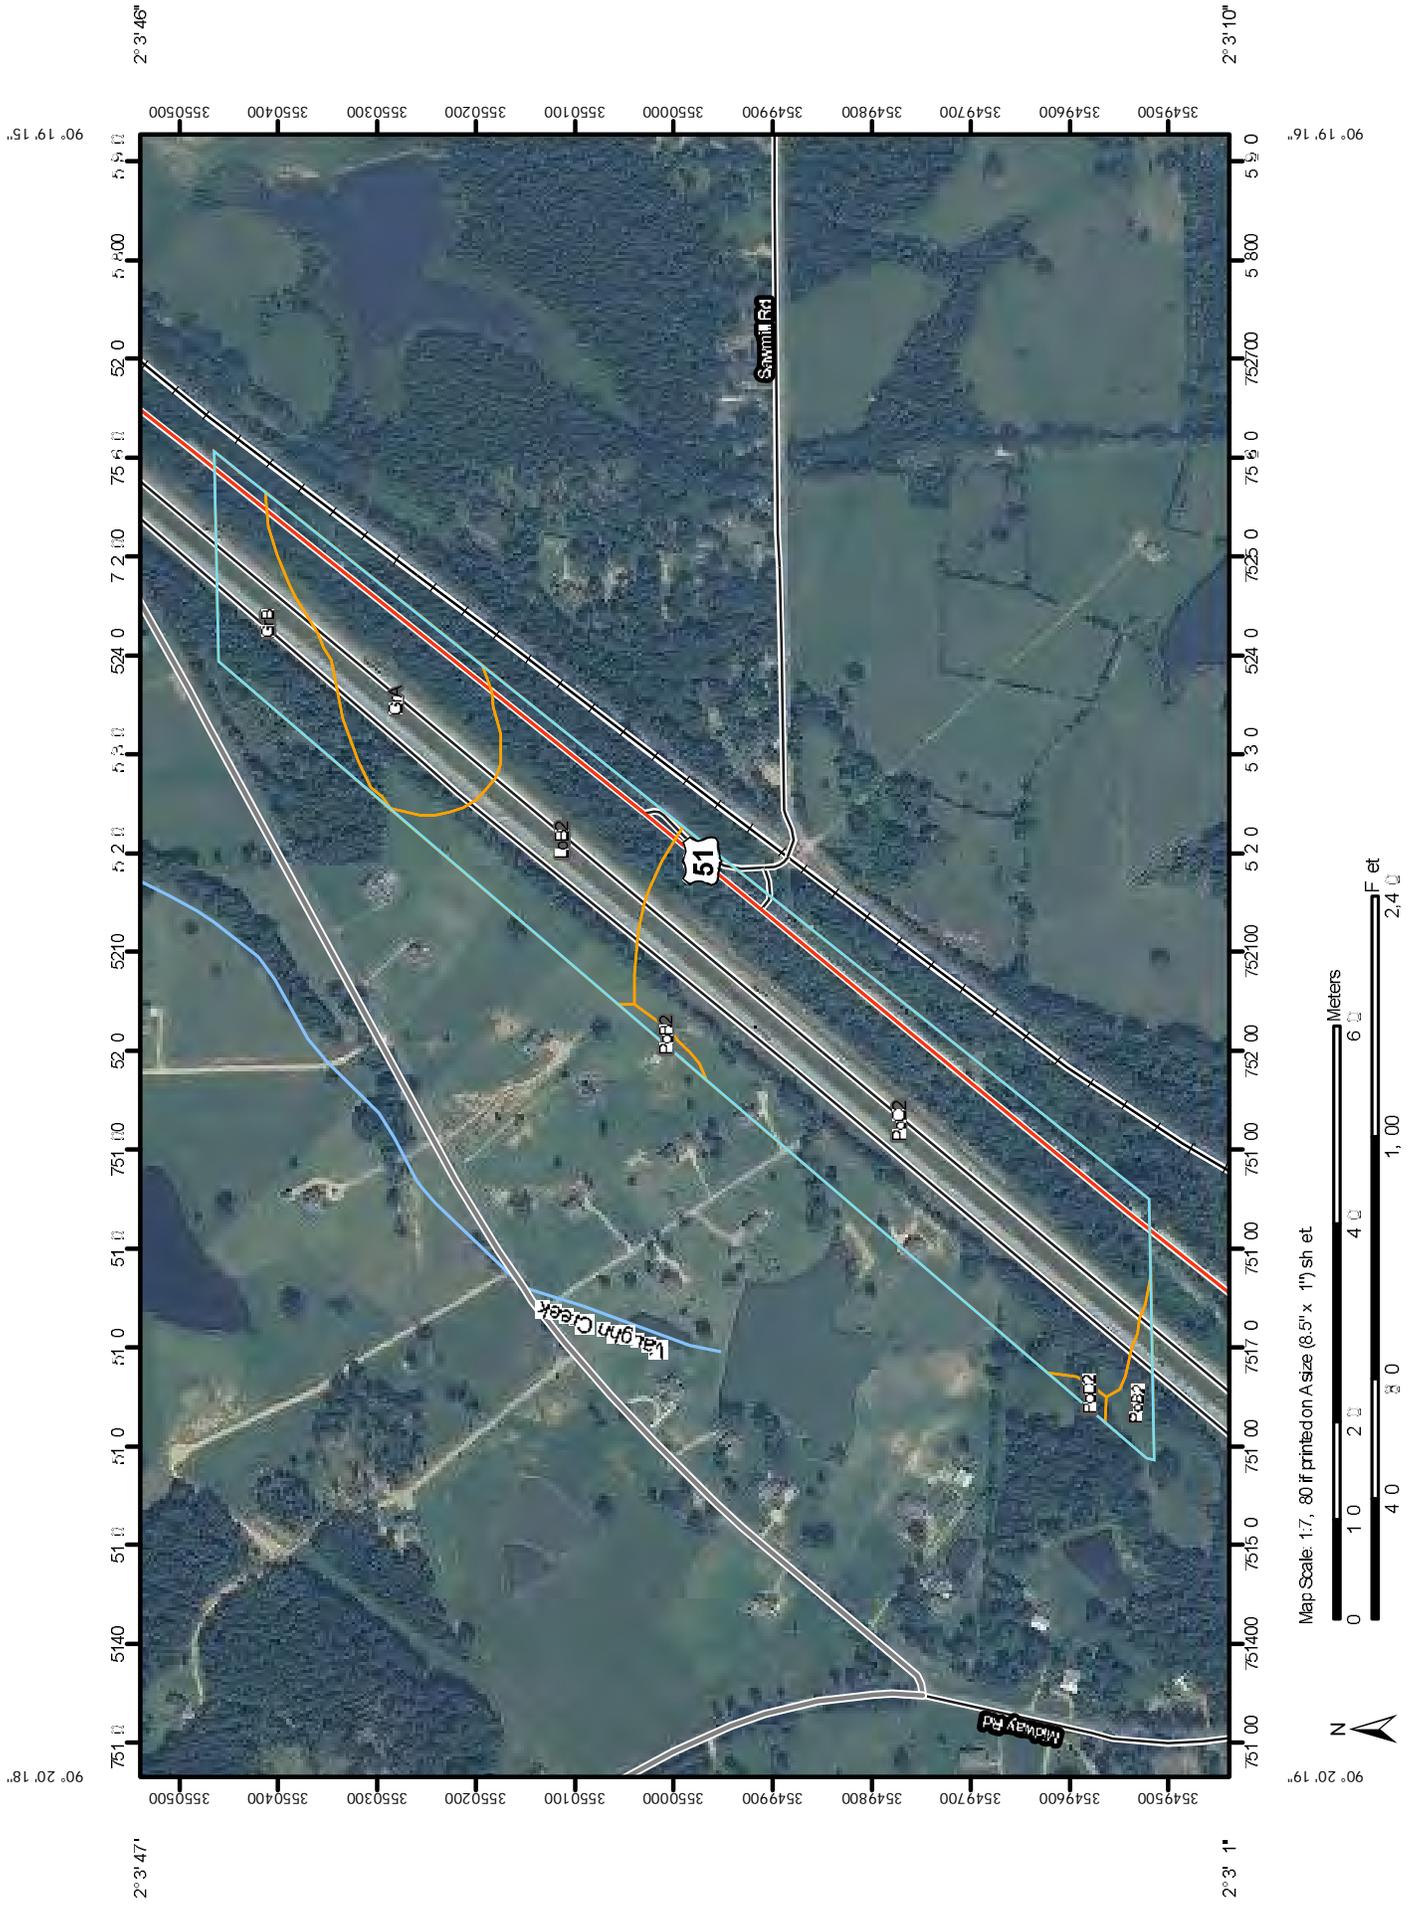

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

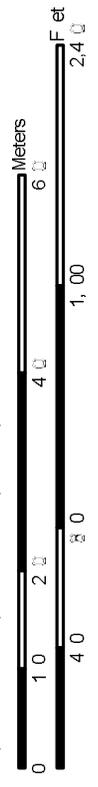

Copiah County, Mississippi (MS029)			
Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
LoB2	Loring silt loam, 2 to 5 percent slopes, eroded	2.7	5.5%
LrE	Lorman fine sandy loam, 12 to 35 percent slopes	2.1	4.3%
PrB2	Providence silt loam, 2 to 5 percent slopes, eroded	13.0	26.9%
SmF	Smithdale sandy loam, 17 to 40 percent slopes	4.2	8.6%
Subtotals for Soil Survey Area		22.0	45.3%
Totals for Area of Interest		48.4	100.0%

Hinds County, Mississippi (MS049)			
Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
PoB2	Providence silt loam, 2 to 5 percent slopes, eroded	14.5	30.0%
PoC2	Providence silt loam, 5 to 8 percent slopes, eroded	0.0	0.1%
PoD2	Providence silt loam, 8 to 15 percent slopes, eroded	11.9	24.5%
Subtotals for Soil Survey Area		26.5	54.7%
Totals for Area of Interest		48.4	100.0%

Soil Map—Hinds County, Mississippi

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- ZONE A** No Base Flood Elevations determined.
- ZONE AE** Base Flood Elevations determined.
- ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR** Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99** Areas to be protected from 1% annual chance flood event by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- ZONE Y** Areas determined to be outside the 0.2% annual chance floodplain.
- ZONE D** Areas in which flood hazards are undetermined, but possible.

and Insurance Program at 1-800-638-6620.

MAP SCALE 1" = 2000'

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths, or flood velocities
- Limit of Moderate Wave Action Delineation

- 513 Base Flood Elevation line and value; elevation in feet*
(EL 987) Base Flood Elevation value where uniform within zone; elevation in feet*

Cultural Resource Survey

Farmer, John

From: Johnson, Adam <ajohnson@mdot.state.ms.us>
Sent: Wednesday, January 18, 2012 8:19 AM
To: Farmer, John
Cc: Underwood, John; Thurman, Kim; Wallace, Chad
Subject: FW: I-55 Project

John,

For the time being, please use the following to document that MDAH will not require additional cultural resource survey work on the subject project. Thanks,

Adam Johnson

Location Engineer
Environmental Division
Mississippi Department of Transportation
Phone: (601) 359-7875
Cell: (769) 798-3677

From: Pam Lieb [<mailto:plieb@mdah.state.ms.us>]
Sent: Monday, December 05, 2011 3:04 PM
To: Underwood, John
Subject: Re: I-55 Project

Yes.

On 12/5/2011 2:56 PM, Underwood, John wrote:
Pam,

A few weeks ago I discussed a upcoming project involving some lane work towards the interior/median of I-55 from McDowell Road to the Copiah County Line. My recollection was that we agreed that no CRS would be required for this phase of the I-55 work. Is that what you remember as well?

Just wanted to confirm our discussion for documentation purposes.

Thanks,
John

INTRODUCTION

At the request of Florence & Hutcheson, Inc., Panamerican Consultants, Inc. (Panamerican) conducted a cultural resources literature and records search (i.e., a “desktop” study) for the 17.1-mi. I-55 Improvements between East McDowell Road and the Hinds-Copiah County line in Hinds County, Mississippi. The goal of a desktop study is to identify all known cultural resources within the proposed corridor that could impede its development; no fieldwork is involved. A desktop study includes conducting a standard cultural resources literature and records check and the preparation of a brief report of findings. The information provided in this report is intended to assist project managers in planning the proposed undertaking. In the event that a standard Phase I cultural resources survey becomes necessary, then the information from the desktop study can be re-cycled (assuming there is no lengthy time duration between the two studies).

PROJECT LOCATION

The I-55 Improvements from East McDowell Road south to the Hinds-Copiah County Line project is located from the southern end of the city of Jackson to the Hinds-Copiah County line. The study area can be identified on four USGS 7.5-minute quadrangle maps: Terry, MS (1971); New Byram, MS (1980); Florence, MS (1980); and Jackson, MS (1980). The study area is a 17.1-mi. long corridor along existing I-55. East McDowell Road marks the northern end of the corridor and the Hinds-Copiah county line marks the southern end of the corridor (Figure 1).

Figure 1. I-55 study corridor highlighted in yellow (map courtesy: Google Earth™).

MISSISSIPPI DEPARTMENT OF ARCHIVES AND HISTORY

A literature and records search was conducted at the Mississippi Department of Archives and History (MDAH) facility in Jackson August 10–11, 2011. A standard site files check was performed and prior archaeological work in the study tracts was researched. The search radius was a 3-km radius around the project corridor.

SITE FILES

Review of the MDAH site files reveals that there are no previously recorded archaeological sites within the study corridor. Within a 3-km radius, there are 53 previously recorded archaeological sites. None of the 53 previously recorded sites are listed on the National Register of Historic Places (NRHP), no sites are listed as potentially eligible for the NRHP, and only one site (Rhodes Creek Mound [22HI704]) has been determined eligible. Twenty-nine of these sites are located east of the study area near a bend in the Pearl River on the New Byram, MS (1980) USGS 7.5-min. quad map.

Within 1 mi. of the study corridor, there are 35 previously recorded archaeological sites (see Table 1). The site locations can be found on Figures 2, 3, 4, 5, 6, and 7. Site 22HI730 is closest to the study corridor; it is located ≈ 40 m east of the study area. Site 22HI518 is relatively close to the study area, being ≈ 100 m east of the study area. However, no previously recorded sites are located within the study corridor.

Table 1. Previously recorded archaeological sites within 3 km of the I-55 study corridor.

Site	Type	Component	Status

PREVIOUS ARCHAEOLOGICAL INVESTIGATIONS

Since the construction of I-55 predates the National Historic Preservation Act of 1966, no holistic survey of the existing I-55 corridor has been conducted. However, three previous surveys were conducted at small sections along I-55 are discussed below, as well as all other past archaeological investigations within a 1-mi. radius of the study corridor.

During 1978, Robert D. Hyatt conducted a cultural resources survey for a 28.5-ac. area for the proposed Oak Creek Subdivision Part IV. Surface inspection in a cleared area and shovel testing elsewhere was conducted during the survey. No sites were found during the survey, and no previously recorded sites were found within the project area.

During 1979, Robert D. Hyatt conducted a 36.5-ac. cultural resources survey in two parcels located in the NW ¼ of Section 12 and the SW ¼ of Section 1 in Township 4 North, Range 1 West. A surface inspection was conducted for the entire survey. No previously recorded sites were documented in the project area and no newly recorded sites were found during the survey.

Another cultural resources survey was conducted by Robert D. Hyatt in 1979 for an 80-ac. area for the proposed Seven Springs Estates Development. No previously recorded sites were located in the project area, but the report did state that several prehistoric scatters were found that had no subsurface material. These scatters were considered ineligible for listing in the NRHP and site numbers were not assigned for these scatters.

The first of the three surveys within the current study area was a cultural resources survey conducted by Bruce J. Gray in 1983 for the proposed I-55/I-20 rehabilitation plan from Terry Road to Gallatin Street. Three previously recorded sites (22HI549, 22HI562, and 22HI563) were located within close proximity to the project area. Additionally, Bailey Hill Civil War Earthworks and Cemetery (NRHP listed 05-06-1975) is located near the project area. One site, 22HI641, was recorded during the survey, but was considered not eligible for listing in the NRHP. No recommendations regarding the sites were made, but recommendations were made for the Mississippi State Highway Department to monitor initial clearing of a heavily wooded section of the Right Of Way (ROW) south and southeast of 22HI641.

During 1984, James Lauro conducted a cultural resources survey for a proposed sewer line running along both sides of Trahon Creek southwest of Raymond Road running south to Terry Road that was 3,100 ft. long. A surface inspection was conducted for the project area, and no cultural material was found during the survey.

James Lauro conducted another cultural resources survey in 1984 for the Farmers Home Administration Project. This 4-ac. area was surface inspected, and no cultural material was found during the survey.

During 1986, Mark DeLeon conducted a cultural resources survey for Forest Woods subdivision located on Lake Dockery. A literature review, shovel testing, and surface inspection were conducted during the survey. No evidence of any cultural material was found during the survey.

Another of the three surveys within the current study area was a cultural resources survey conducted by Robert D. Hyatt in 1989 for the proposed reconstruction of the interchange at I-55 and Byram Road in the Byram vicinity. A literature review, shovel testing, and surface inspection were conducted during the survey. No evidence of any cultural material was found during the survey.

The last of the three surveys within the current study area was a cultural resources survey conducted by Bruce J. Gray in 1991 for the proposed bridge replacements on I-55 at Caney

Creek located in South Jackson. The closest site was 22HI518 (previously recorded), which lay \approx 610 m (2,000 ft.) south of the project area. A visual inspection of the project area was conducted and no new sites were found. The bridges were inspected and considered ineligible for listing in the NRHP or the Historic Landmark Bridges Inventory.

In 1991, James Lauro conducted a cultural resources survey of a 13.4-ac. borrow pit located in Section 23, Township 4 North, Range 1 West. Shovel testing and surface inspection was conducted in the project area, and no evidence of cultural material was found.

During 1993, James Lauro conducted a cultural resources survey and testing for the U.S. Army Corps of Engineers (USACE) along both banks of the Pearl River in the Jackson Metropolitan Area. This area is referred to as the Pearl River Basin Development District. Forty-one newly recorded archaeological sites were found during the survey. Testing was conducted at the following previously recorded sites: City Mound (22HI672); Flowood Mounds (22RA502); the Hemphill Bluff Site (22RA609); Wansley Pasture Site (22RA611); and Richmond Lake Mound (22RA617). The only sites found to be eligible for listing on the NRHP were City Mound (22HI672), Flowood Mounds (22RA502), and Richmond Lake Mound (22RA617). Avoidance of these sites was recommended, since the presence of burials is likely. Twenty-one of the newly recorded sites (22HI682, 22HI683, 22HI684, 22HI685, 22HI686, 22HI687, 22HI688, 22HI689, 22HI690, 22HI691, 22HI692, 22HI693, 22HI694, 22HI695, 22HI696, 22HI697, 22HI726, 22HI727, 22HI728, 22HI729, 22HI730) were located within 1 mi. of the study area, but no eligibility determinations have been made for these sites.

In 2002, James Lauro conducted a cultural resources survey for a 60-ac. tract of land near Terry in Hinds County. No previously recorded sites were recorded in the project area. Three isolated finds were encountered during the survey, but no significant cultural resources were encountered during the survey.

In 2003, James Lauro conducted a cultural resources survey of two borrow areas in Hinds and Rankin counties. No previously recorded sites were located in the project area. Surface inspection and shovel testing was conducted during the survey, and no evidence of cultural material was found.

In 2006, Joel H. Watkins from the Office of Archaeological Research at the University of Alabama conducted a cultural resources survey of 41 locations along Gulf South Pipeline Company's proposed East Texas to Mississippi Expansion Pipeline. Only five previously recorded sites existed within close proximity to the locations. No cultural resources were found within any of the 41 locations.

During 2007, William F. Stanyard conducted a cultural resources survey for the proposed Midcontinent Express Pipeline, LLC project. This is a natural gas pipeline that runs \approx 806 km (501 mi.) from Bryan County, Oklahoma to Choctaw County, Alabama. The Mississippi segment is \approx 248 km (154 mi.) long and covers Warren, Hinds, Rankin, Simpson, Smith, Jasper, and Clarke counties. A total of 54 sites were encountered in Mississippi. Five previously recorded sites were within the corridor. Only ten of these sites were located in Hinds County, including Berry Mound (22HI526). Avoidance was recommended for Berry Mound, since it had been listed on the NRHP November 25, 1969. The only site within a 3-km radius of the current I-55 study corridor that was found during the pipeline survey was 22HI842, an undetermined prehistoric lithic scatter.

NATIONAL ARCHAEOLOGICAL DATABASE

The National Archeological Database (NADB) is a bibliographic inventory of over 350,000 reports on archeological investigation and planning, mostly of limited circulation (i.e., "gray

literature”; National Archeological Database 2004). NADB was last updated in August 2004. The Author searched NADB for Hinds County, Mississippi literature, and this query resulted in 40 “hits.” Five of the hits are projects discussed in the *Previous Archaeological Investigations* section above. They include the Seven Springs Estates Survey by Robert D. Hyatt in 1979, the two reports by James Lauro in 1984, the Forest Woods Subdivision survey by Mark DeLeon in 1986, and a 1983 survey by Bruce J. Gray. The other 35 projects on the NADB list for Hinds County are not directly applicable to the I-55 study corridor. The other projects discussed in the *Previous Archaeological Investigations* section have not been entered into the NADB dataset.

PREVIOUSLY RECORDED HISTORICAL RESOURCES

Ms. Angie Clifton conducted a review of the records and files at the MDAH office in Jackson for this project on August 11, 2011. A standard property files check was performed. A count of the historic resources within a 3-km radius was taken for the study corridor. A total of 82 historic resources were recorded within the 3-km radius of the study corridor. Forty-three of these resources are within the city of Jackson, three historic resources are in the Byram vicinity, and 35 resources are within the vicinity of Terry.

Since the Mississippi Department of Transportation (MDOT) only requires a 1-mi. Area of Potential Effect (APE) for historic resources, detailed information on individual resources was taken only for resources within 1-mi. of the study area. No structures were within the study corridor. Within 1 mi. of the study corridor, there are 51 historic resources. Five of these historic resources have previously been listed on the NRHP (see Table 2).

Table 2. Previously Recorded Historic Resources within 1 mi. of the I-55 Study Corridor.

MDAH Inventory No.	Name	Address	NRHP Eligibility
049-JAC-4020	ca. 1948 Industrial Building	616 McDowell Rd.	Undetermined
049-JAC-4001-NR-ML	Bailey Hill Civil War Earthworks and Cemetery	Bounded by McDowell Rd., Gallatin St., I-55, and I-20	Listed
049-JAC-4042	d. 1941 General Electric Lamp & Gas Works	Off Highway 80	Potentially Eligible
049-JAC-4024	d. 1956 Baker Elementary Building	300 Santa Clair St.	Potentially Eligible
049-JAC-4022	d. 1960 Alfred T. Whitten Middle School Building	210 Daniel Lake Blvd.	Undetermined
049-JAC-4028	d. 1959 Robert E. Lee Elementary School III Building	330 Judy Street	Undetermined
049-JAC-4025	d. 1951 Laura R. Lester Elementary School Building	2350 Oakhurst Dr.	Undetermined
049-JAC-4010	ca. 1940 Henry C. Ashcraft House (Tudor Revival)	103 Alta Woods Blvd.	Undetermined
049-JAC-4006	ca. 1840 Mayrant-Lester Home	2155 Terry Rd.	Not Eligible
049-JAC-4011	ca. 1950 House at 160 Alta Woods Blvd. (Colonial Revival)	160 Alta Woods Blvd.	Undetermined
049-JAC-4012	d. 1938 Sherwood W. Wise, Jr. House (Colonial Revival)	172 Alta Woods Blvd.	Undetermined
049-JAC-4013	d. 1934 Joseph S. Wise House [Sherwood Wise House] (Colonial Revival)	224 Alta Woods Blvd.	Undetermined
049-BYR-2501	Byram Consolidated School Building	No address provided	Undetermined

MDAH Inventory No.	Name	Address	NRHP Eligibility
049-BYR-2503-NR	ca. 1905 Byram Swinging Bridge over Pearl River	Florence-Byram Rd.	Listed
049-BYR-2505	ca. 1840 Lewis Plantation House [also Weatherbee Plantation] (Greek Revival)	8892 Gary Rd.	Undetermined
049-BYR-2506-AC	ca. 1835 Stovall Cemetery	Wyndale Road	Undetermined
N/A	Illinois Central Railroad Overpass	N/A	Undetermined
N/A	Terry Water Tower	Utica and Carpenter Sts.	Undetermined
049-TER-0001	Head House	Claiborne St.	Undetermined
049-TER-0002-NR	Wolfe House	401 Claiborne St.	Listed
049-TER-0003	House on Cunningham Ave.	Cunningham Ave.	Undetermined
049-TER-0005	Terry Mercantile Company Building	Cunningham Ave.	Undetermined
049-TER-0006	Birdsong Building	N/A	Undetermined
049-TER-0007	Terry City Hall Building	129 Railroad Ave.	Undetermined
049-TER-0008	House on Railroad Ave.	Railroad Ave.	Undetermined
049-TER-0009-NR	Dudley Jones House [also Greenway House]	115 Railroad Ave.	Listed
049-TER-0010	Cottage with Portico on Raymond St.	Raymond St.	Undetermined
049-TER-0011	House	N/A	Undetermined
049-TER-0012	Causey House	Utica St.	Undetermined
049-TER-0013	Episcopal Church of the Good Shepherd	109 Claiborne St.	Undetermined
049-TER-0014	Cottage	N/A	Undetermined
049-TER-0015	Berea Baptist Church	Brown and Utica Sts.	Undetermined
049-TER-0016	Stokes House	SE corner of Utica and Stuart Sts.	Undetermined
049-TER-0017	House	NW corner of Utica and Stuart Sts.	Undetermined
049-TER-0018	House	W of Utica and Stuart Sts.	Undetermined
049-TER-0019	House	Utica St.	Undetermined
049-TER-0022-NR	Illinois Central Railroad Depot [also Terry Depot]	102 Railroad Ave.	Listed
049-TER-0023	Francis House	420 Cunningham St. West	Undetermined
049-TER-0025	d. 1863 Terry Cemetery	Located off Cemetery Dr. \approx 150 m east of I-55 at the Cunningham exit.	Undetermined
049-TER-0026	Brick Bungalow at 409 Cunningham Ave.	409 Cunningham Ave.	Undetermined
049-TER-0027	Terry Drug Company Building	102 Cunningham Ave.	Undetermined
049-TER-0028	Commercial Building at 114 Cunningham Ave.	114 Cunningham Ave.	Undetermined
049-TER-0029	Commercial Building at 116 Cunningham Ave.	116 Cunningham Ave.	Undetermined
049-TER-0033	Terry Grove Missionary Baptist Church	325 Jackson St. North	Undetermined

MDAH Inventory No.	Name	Address	NRHP Eligibility
049-TER-8001	Riverwood [also Pleasant Retreat]	1387 Fortner Rd.	Undetermined
049-TER-8002	Vaughn Creek Bridge	3 mi. east of Terry	Undetermined
049-TER-8003	Pearl River Bridge II	Rosemary Rd.	Undetermined
049-TER-8004	John Sanders House	Wyndale Rd.	Undetermined
049-TER-8007	Hester School (Rosenwald)	N/A	Undetermined
049-TER-8008	John S. Torrey House [also Pilgrim Rest Plantation]	Moved from Jefferson County-former MDAH Inventory No. 063-UCH-8001-MVD	Undetermined
049-TER-8009	ca. 1834 Southern Cedars Plantation	Near intersection of Midway and Kimball	Undetermined

CEMETERIES NEAR THE STUDY AREA

Seven cemeteries are located within a 1-mi. radius of the study corridor (listed below). The two cemeteries closest to the study corridor are the Benevolent Society Cemetery (≈ 30 m northwest) and the McCowan Cemetery (≈ 50 m southeast).

- ***Salem Cemetery*** is located ≈ 200 m northwest of I-55 near the Hinds-Copiah county line on the 1971 Terry, MS USGS 7.5-min. quad map.
- ***Benevolent Society Cemetery*** is located ≈ 30 m northwest of I-55 within the Terry vicinity on the 1971 Terry, MS USGS 7.5-min. quad map.
- ***Terry Cemetery*** is located ≈ 150 m east of I-55 in the Terry vicinity on the 1971 Terry, MS USGS 7.5-min. quad map.
- ***McCowan Cemetery*** is located ≈ 50 m southeast of I-55 just south of Taylorsville on the 1980 Florence, MS USGS 7.5-min. quad map.
- ***Bailey Cemetery*** is located $\approx 1,200$ m northeast of the I-55 corridor just south of I-20 on the 1980 Jackson, MS USGS 7.5-min. quad map.
- ***Mt. Eva Cemetery*** is located ≈ 140 m east of I-55 on the 1980 New Byram, MS USGS 7.5-min. quad map.
- ***Old Byram Cemetery*** is located ≈ 750 m southeast of I-55 at 7541 S. Siwell Road on the 1980 New Byram, MS USGS 7.5-min. quad map.

NATIONAL REGISTER OF HISTORIC PLACES LISTINGS

As of this writing, there are 93 NRHP-listed properties in Hinds County, Mississippi (National Register of Historic Places 2011), which includes structures, archaeological sites, a cemetery, and Civil War sites. Fifty of the NRHP-listed properties are within the city of Jackson. There are no NRHP-listed properties with an I-55 address. The majority of the listed properties in Hinds County are structures. The seven archaeological sites listed on the NRHP include the following: Baldwin's Ferry Mound (NRHP listed 09-24-1998); Bardin Mound (22HI537; NRHP listed 03-01-1987); Berry Mound and Village Archaeological Site (NRHP listed 11-25-1969); City Mound (22HI672; NRHP listed 12-01-1988); Dupree Mound and Village Site (NRHP listed 11-25-1969); Pocahontas Mound A (NRHP listed 11-25-1969); and Pocahontas Mound B (NRHP listed 04-11-1972). The only cemetery listed on the NRHP is Greenwood Cemetery (NRHP listed 12-20-1984). The three Civil War sites on the NRHP include: Bailey Hill Civil

War Earthworks (NRHP listed 05-6-1975); Big Black River Battlefield (NRHP listed 11-23-1971); and Raymond Battlefield Site (NRHP listed 01-13-1972).

GENERAL LAND OFFICE PLAT MAPS

The 1820–1821 General Land Office (GLO) plat map for Township 5 North Range 1 East was inspected for evidence of early historic occupation within the study corridor (Figure 8). No cultural features are depicted on this plat within the study corridor, but Carrolls Road (now Terry Road) is located just north and west of the study area. Jackson is shown as a small settlement less than 2 mi. northeast of the study corridor. The sections along the Pearl River have also begun to be divided into \approx 80-ac. parcels.

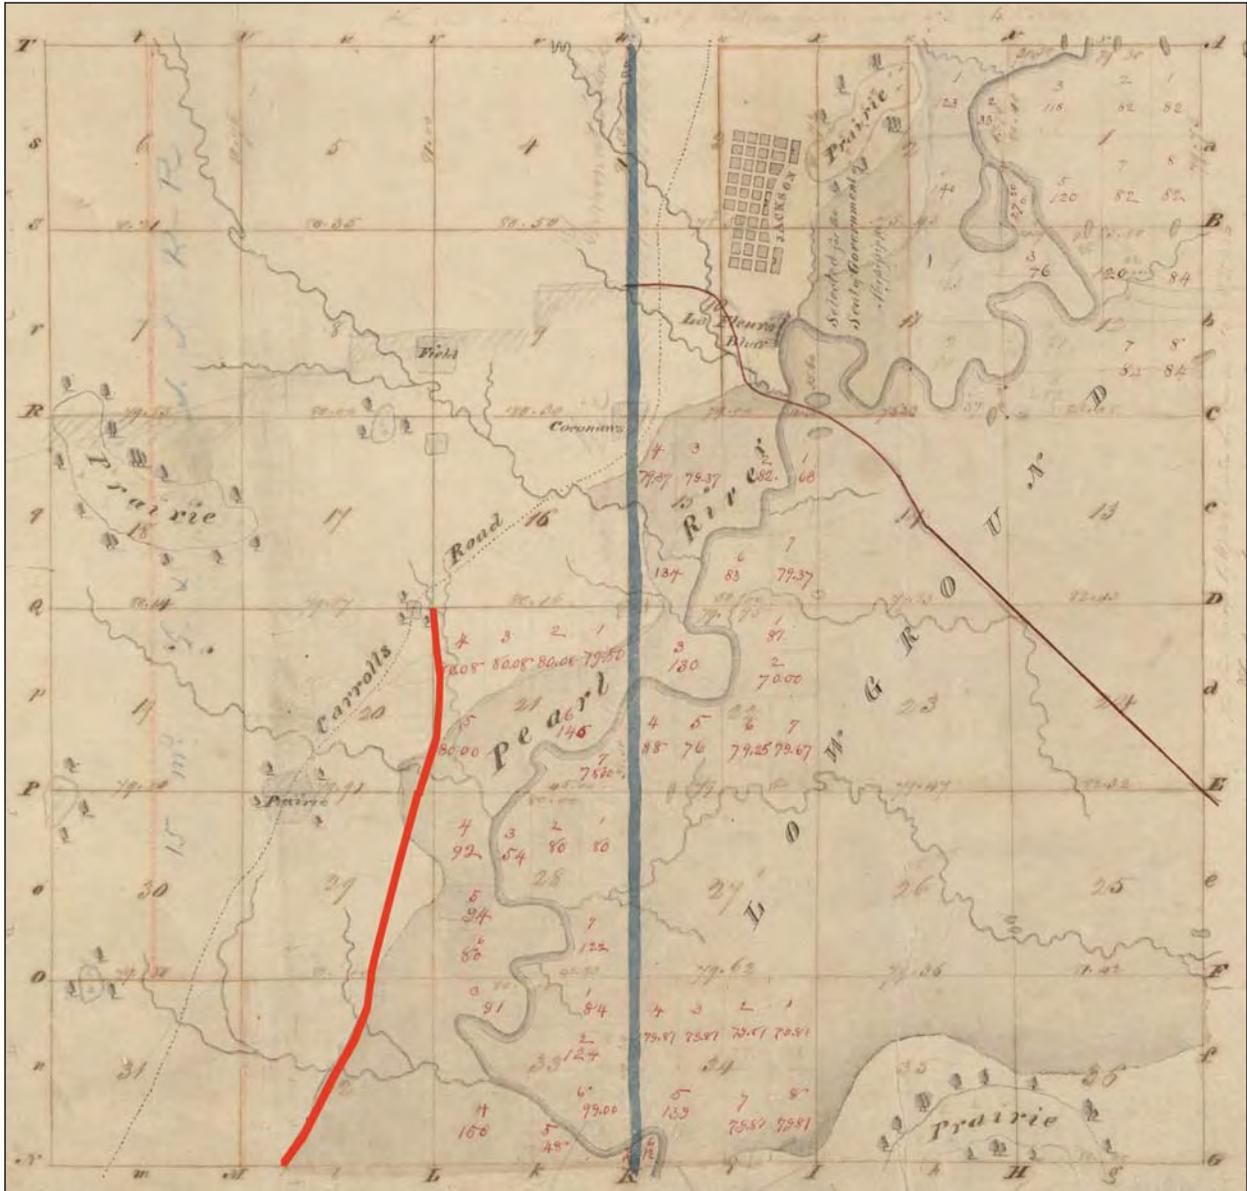

Figure 8. The 1820–1821 Township 5 North, Range 1 East plat map, with corridor highlighted in red.

The 1820–1821 GLO plat map for Township 4 North Range 1 East was also inspected for evidence of early historic occupation within the study corridor (Figure 9). No cultural features are depicted on this plat within the study area. Carrolls Road is mapped less than 0.50 mi. west of the study corridor and sections are divided into \approx 80-ac. parcels along the Pearl River.

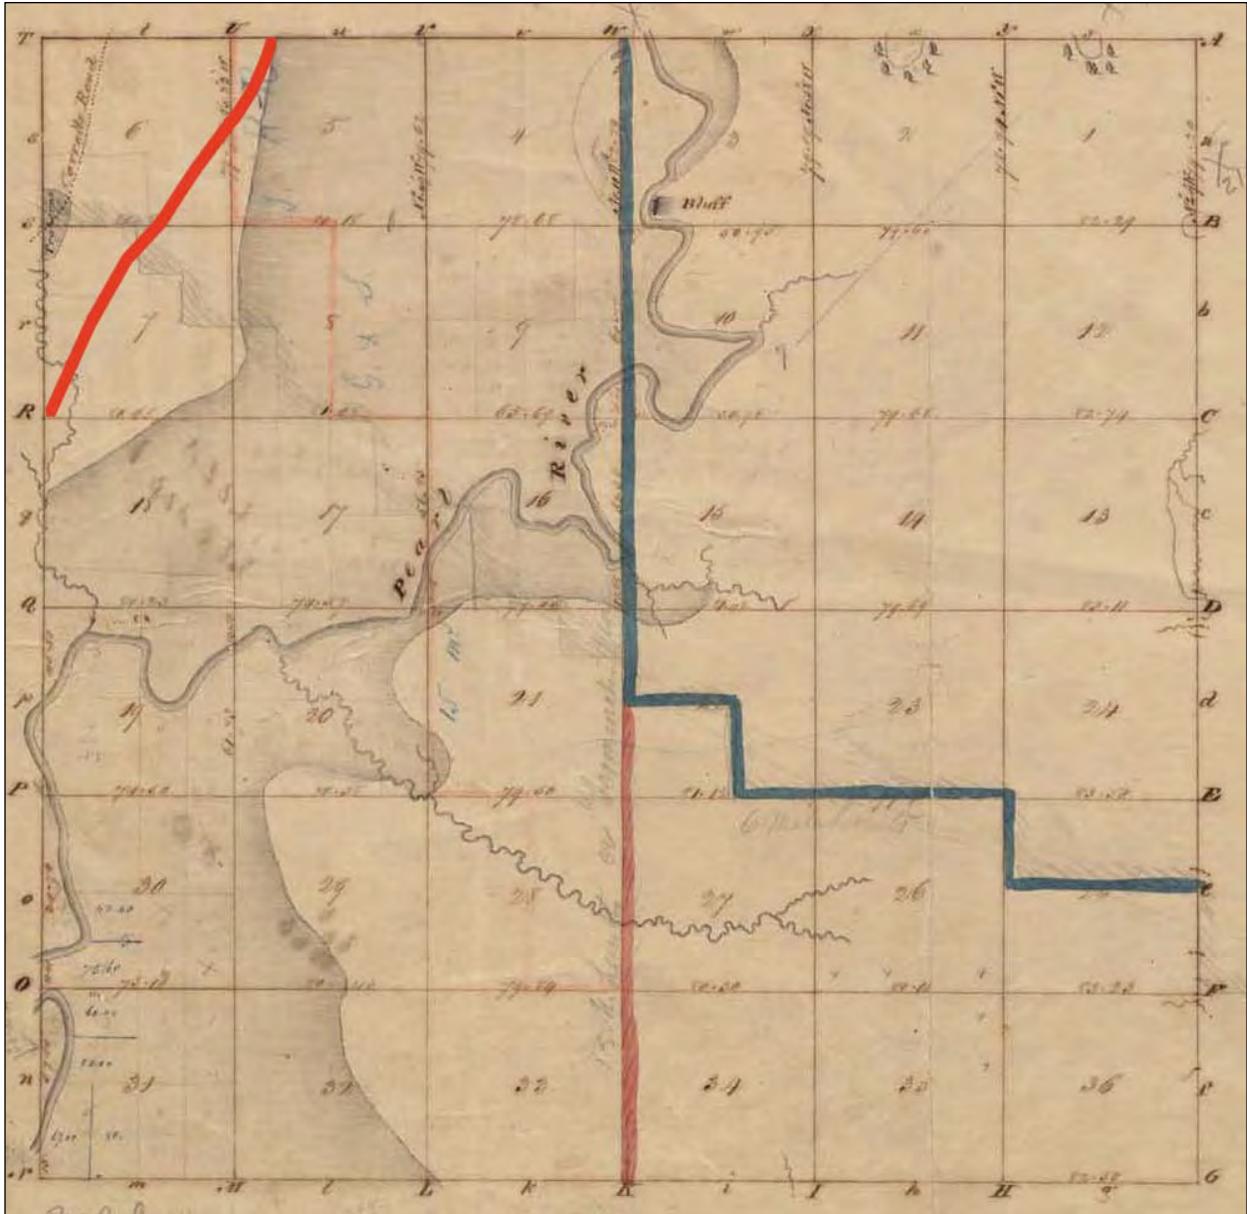

Figure 9. The 1820-1821 Township 4 North, Range 1 East plat map, with corridor highlighted in red.

The 1822 GLO plat map for Township 4 North Range 1 West was also inspected for evidence of early historic occupation within the study corridor (Figure 10). No cultural features are depicted on this plat within the study area. Carrolls Road is mapped running west along the study corridor and three sections are divided into \approx 80-ac. parcels along the Pearl River.

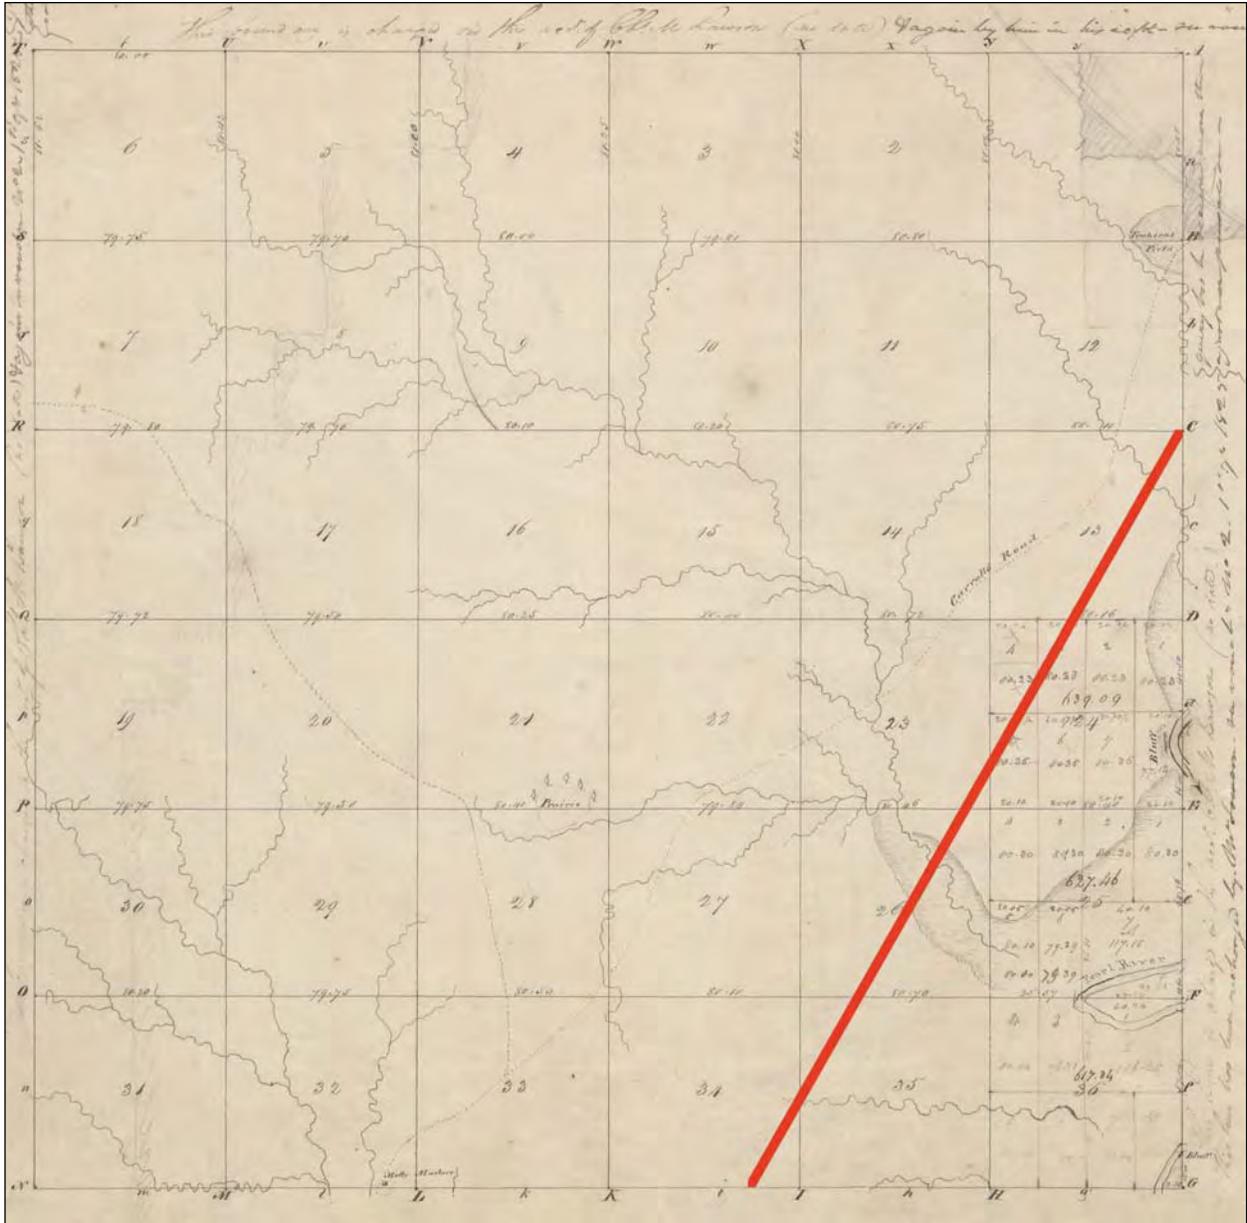

Figure 10. The 1822 Township 4 North, Range 1 West plat map, with corridor highlighted in red.

The 1822 GLO plat map for Township 3 North Range 1 East was also inspected for evidence of early historic occupation within the study corridor (Figure 11). No cultural features are depicted on this plat within the study area. The sections are divided into \approx 80-ac. parcels along the Pearl River.

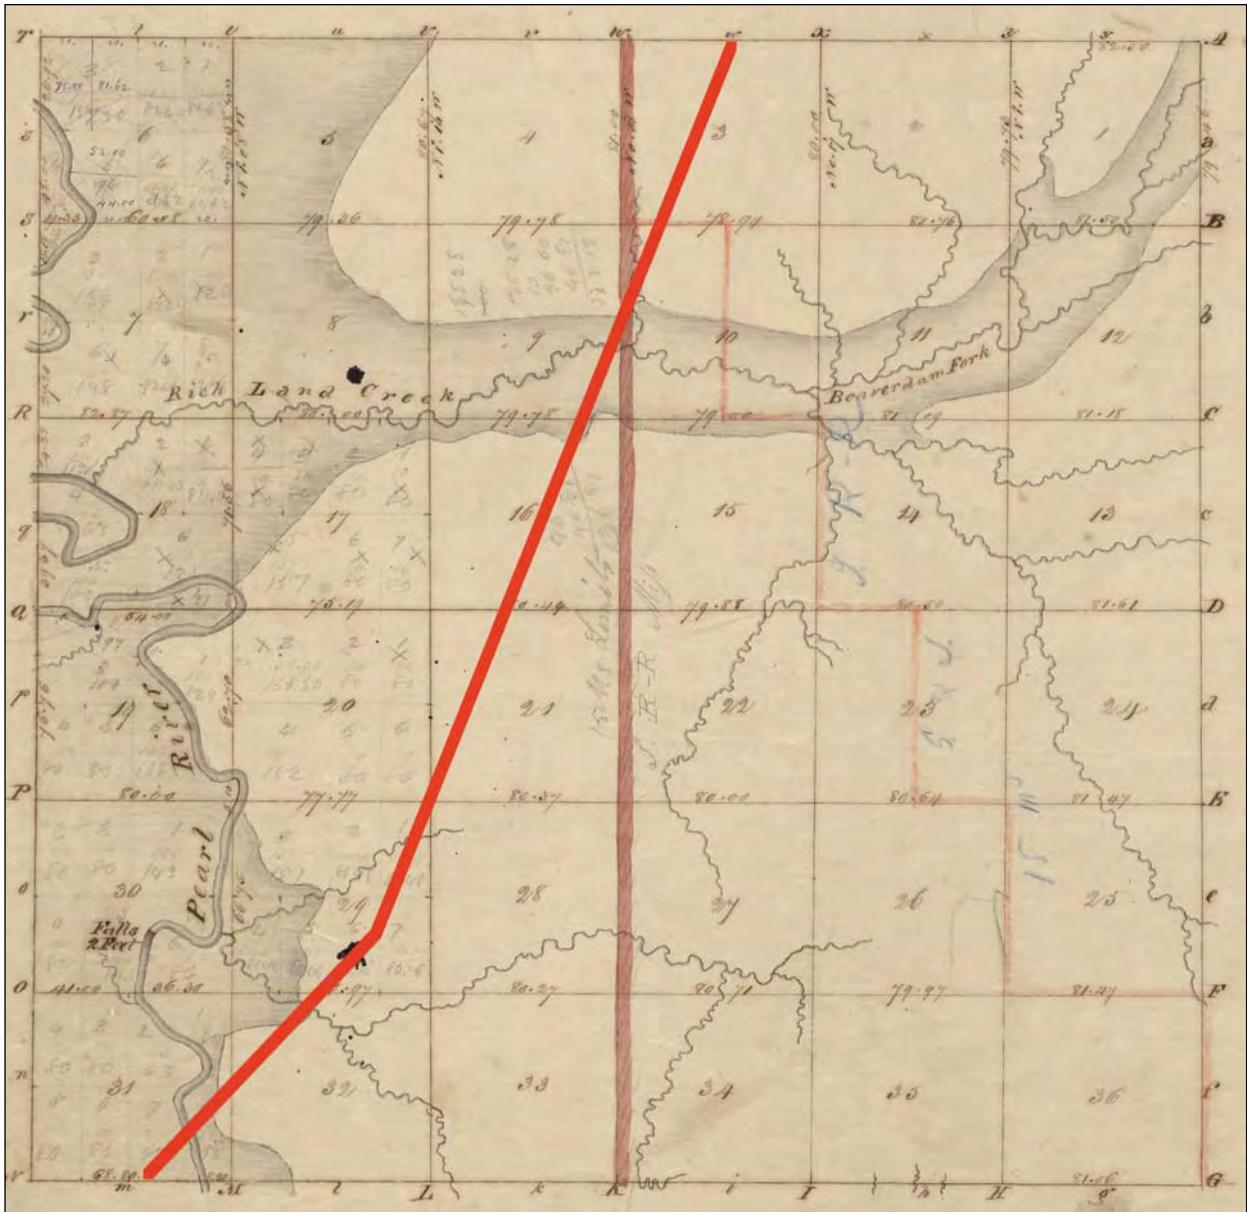

Figure 11. The 1822 Township 3 North, Range 1 East plat map, with corridor highlighted in red.

CONTEXT STATEMENT

The result of the literature and records search, presented above, can be summarized and interpreted as follows. Site 22HI730 is closest to the study corridor and is located ≈ 40 m east of the study corridor. Site 22HI518 is relatively close to the study area, being ≈ 100 m east of the study corridor. There are no previously recorded archaeological sites on the study corridor. Within 1 mi. of the study corridor there are 35 additional archaeological sites (see Table 1).

There have been a number of previous archaeological investigations near this study corridor, but only three previous surveys have been conducted that are related to I-55. No comprehensive study has been conducted for I-55 since its construction predates the National Historic Preservation Act of 1966. The most intensive archaeological work in this vicinity has been a cultural resources survey conducted for the USACE along both banks of the Pearl River in the Pearl River Basin Development District. Twenty-one of the newly recorded sites (22HI682, 22HI683, 22HI684, 22HI685, 22HI686, 22HI687, 22HI688, 22HI689, 22HI690, 22HI691, 22HI692, 22HI693, 22HI694, 22HI695, 22HI696, 22HI697, 22HI726, 22HI727, 22HI728, 22HI729, 22HI730) were located within 1 mi. of the study corridor, but no eligibility determinations have been made for these sites.

The previously reported archaeological sites in the study vicinity all have prehistoric components (n=35). The prehistoric components are clustered along the Pearl River to the east of the study corridor. Because tributaries that represent the headwaters of the Pearl River cross cut the study corridor, there is a possibility that an unrecorded prehistoric site (or sites) could be located along the I-55 study corridor. The northern end of the study corridor is situated in a heavily developed area in the Jackson Metropolitan Area, which gives it a low probability of containing any intact unrecorded cultural resources.

According to the records at the MDAH facility, fifty-one historic resources are recorded within a 1-mi. radius of the study corridor (Table 2). Five of these historic resources are listed on the NRHP. The NRHP-listed resources include: Bailey Hill Civil War Earthworks and Cemetery (049-JAC-4001-NR-ML); ca. 1905 Byram Swinging Bridge (049-BYR-2503-NR); Wolfe House (049-TER-0002-NR); Dudley Jones House (049-TER-0009-NR); and the Illinois Central Railroad Depot (also Terry Depot; 049-TER-0022-NR). Two other historic resources (1941 General Electric Lamp & Gas Works [049-JAC-4042] and 1956 Baker Elementary Building [049-JAC-4024]) have been determined to be potentially eligible for listing on the NRHP. No historic resources are within the study corridor. However, since all of these historic resources are within a 1-mi. radius of the study corridor, more work needs to be conducted to determine if any of these properties will be visually impacted by the proposed project.

Portions of the study corridor south of the city of Jackson are undeveloped and located along tributaries of the Pearl River. Unrecorded archaeological sites could exist in these settings. For this reason, an archaeological field assessment is recommended. Additionally, the Benevolent Society Cemetery and the McCowan Cemetery are relatively close to the study corridor and will require avoidance.

Regulatory & Government Agency Correspondence

Florence & Hutcheson

CONSULTING ENGINEERS

August 1, 2011

Mr. David Lofton
Permits Section Chief
US Army Corps of Engineers- Vicksburg District
4155 Clay Street
Vicksburg, MS 39183-3435

**Re: Proposed Improvements to I-55 from Copiah County Line
to McDowell Road
FMS 106023-IM-0055-02(218)
Hinds County, Mississippi**

Dear Mr. Lofton:

The Mississippi Department of Transportation (MDOT) is proposing improvements to Interstate 55 from the Copiah County Line northward to McDowell Road in Hinds County, Mississippi. The project is positioned immediately south of Jackson, Mississippi and is approximately 17 miles in length. MDOT is currently conducting preliminary engineering and environmental studies for the proposed project. Florence & Hutcheson (F&H) has been assigned to assist with these tasks.

The purpose of the project is to (1) improve roadway conditions throughout the reach of the project and (2) construct additional lanes from Terry Road to McDowell Road to relieve congestion for this portion of the interstate system. MDOT does not anticipate the acquisition of right-of-way for this project. Consideration will be given to utilizing the existing alignment with necessary attention given of potential impacts, future traffic volumes, constructability, and maintenance of traffic.

Since federal monies will be utilized for the project, compliance with the National Environmental Policy Act (NEPA) of 1969 is required. F&H respectfully requests that you provide information on your agency's relevant interests within the study area as we initiate the work toward the completion of an Environmental Assessment (EA). Please advise if you determine that a site visit to the proposed project site with the project team would be beneficial to your evaluation. Please find attached maps of the proposed project location for your use in review of the project.

If you have questions or concerns, please contact me at (615) 867-9400 or Mr. Chad Wallace of the Mississippi Department of Transportation at (601) 359-7920. You may also email your concerns to me at jfarmer@flohut.com or Mr. Wallace at rcwallace@mdot.state.ms.us.

Sincerely,

FLORENCE & HUTCHESON

John L. Farmer, PE, CPESC
Senior Environmental Engineer

David Lofton
Permits Chief
US Army Corps of Engineers- Vicksburg District
4155 Clay Street
Vicksburg, MS 39183-3435

Dear Mr. Lofton:

On behalf of the Mississippi Department of Transportation (MDOT) and the Federal Highway Administration (FHWA), we submitted a Letter of Interest (LOI) to your attention on August 1, 2011 concerning the proposed improvements to I-55 from the Copiah County Line to McDowell Road south of Jackson in Hinds County, MS.

Since federal monies will be utilized for the project, compliance with the National Environmental Policy Act (NEPA) of 1969 is required. We requested that you provide information on your agency's relevant interests within the study area as we work toward the completion of an *Environmental Assessment (EA)*.

In the case that you are not in receipt of the LOI please find attached a copy of the letter and associated location maps for your use.

If we do not receive a written response to the LOI by September 19, 2011, we will consider that your agency has no comments or concerns prior to the availability of the *Draft Environmental Assessment*.

Sincerely,

John L. Farmer, PE, CPESC

Classification: UNCLASSIFIED

Caveats: NONE

Thanks. We originally were asked by MDOT Environmental if there was a need for a site visit on this project. Hence the confusion on the project because I thought that there had already been a response on this project. It was just not a response back to your letter. Once I received something from the Reg-All email, I got back with you. Sorry for the delay.

Chad,

We did not receive this letter from Florence and Hutcheson (F&H) on this project but we did receive an email on it from Mr. Farmer of F&H yesterday.

Based upon the information that you and Ms. Kim Thurman relayed to me on Aug 1 and 2, 2011, the Corps does not see any concerns with this project nor do we see the need for a site visit. If the construction designs for this project go out of the existing ROW/median and impact further jurisdictional areas that are not located in those areas, please notify the Corps at your earliest convenience.

Respectfully,

**Re: Proposed Improvements to I-55 from Copiah County Line
to McDowell Road
FMS 106023-IM-0055-02(218)
Hinds County, Mississippi**

Dear Mr. Ricks:

The Mississippi Department of Transportation (MDOT) is proposing improvements to Interstate 55 from the Copiah County Line northward to McDowell Road in Hinds County, Mississippi. The project is positioned immediately south of Jackson, Mississippi and is approximately 17 miles in length. MDOT is currently conducting preliminary engineering and environmental studies for the proposed project. Florence & Hutcheson (F&H) has been assigned to assist with these tasks.

The purpose of the project is to (1) improve roadway conditions throughout the reach of the project and (2) construct additional lanes from Terry Road to McDowell Road to relieve congestion for this portion of the interstate system. MDOT does not anticipate the acquisition of right-of-way for this project. Consideration will be given to utilizing the existing alignment with necessary attention given of potential impacts, future traffic volumes, constructability, and maintenance of traffic.

Since federal monies will be utilized for the project, compliance with the National Environmental Policy Act (NEPA) of 1969 is required. F&H respectfully requests that you provide information on your agency's relevant interests within the study area as we initiate the work toward the completion of an Environmental Assessment (EA). Please advise if you determine that a site visit to the proposed project site with the project team would be beneficial to your evaluation. Please find attached maps of the proposed project location for your use in review of the project.

If you have questions or concerns, please contact me at (615) 867-9400 or Mr. Chad Wallace of the Mississippi Department of Transportation at (601) 359-7920. You may also email your concerns to me at jfarmer@flohut.com or Mr. Wallace at rcwallace@mdot.state.ms.us.

Sincerely,

FLORENCE & HUTCHESON

Dear Mr. Farmer:

The Fish and Wildlife Service (Service) has reviewed the information in your letter dated August 1, 2011, regarding the proposed improvements to I-55 from Copiah County line to McDowell Road in Hinds County in Mississippi. Our comments are submitted in accordance with the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.).

Based on the information you provided, the Service concludes that there are no federally listed threatened or endangered species or their critical habitat within the vicinity of the proposed project. No further consultation with this office is required unless there are changes in the scope or location of the proposed project.

If you have any questions, please contact Sandra Kilpatrick at our office, telephone: (601) 321-1135.

Sincerely,

for Stephen M. Ricks

R# 8489
FMS 106023-IM-0055-02(218)

To John Farmer:

In response to your request for information dated August 1, 2011, we have searched our database for occurrences of state or federally listed species and species of special concern that occur within 2 miles of the site of the proposed project. Please find our concerns and recommendations below.

The following species of concern may occur within 2 miles of the proposed project area:

SCIENTIFIC NAME	COMMON NAME	FED	STATE	STATE RANK
<i>Uniomerus declivis</i>	Tapered Pondhorn			S2
<i>Truncilla truncata</i>	Deertoe			S3
<i>Lasmigona complanata</i>	White Heelsplitter			S3
<i>Obovaria unicolor</i>	Alabama Hickorynut			S1

State Rank

S1 — Critically imperiled in Mississippi because of extreme rarity (5 or fewer occurrences or very few remaining individuals or acres) or because of some factor(s) making it vulnerable to extirpation.

S2 — Imperiled in Mississippi because of rarity (6 to 20 occurrences or few remaining individuals or acres) or because of some factor(s) making it vulnerable to extirpation.

S3 — Rare or uncommon in Mississippi (on the order of 21 to 100 occurrences).

State and Federal Status

LE Endangered — A species which is in danger of extinction throughout all or a significant portion of its range.

LT Threatened — A species likely to become endangered in foreseeable future throughout all or a significant portion of its range.

Based on information provided, we conclude that if best management practices are properly implemented, monitored, and maintained (particularly measures to prevent, or at least, minimize negative impacts to water quality), the proposed project likely poses no threat to listed species or their habitats.

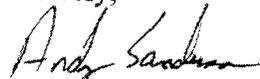

Recommendations:

We recommend that best management practices be properly implemented, monitored, and maintained for compliance, specifically measures that will prevent suspended silt and contaminants from leaving the site in stormwater run-off as this may negatively affect water quality and habitat conditions within nearby streams and waterbodies.

In addition, portions of this project site are underlain by hydric soils and there will be multiple stream crossings. If this project is approved, we ask that serious consideration be given to the cumulative impacts of wetland/stream disturbance and elimination, and that appropriate in-kind mitigation be provided.

Please feel free to contact us if we can provide any additional information, resources, or assistance that will help minimize negative impacts to the species and/or ecological communities identified in this review. We are happy to work with you to ensure that our state's precious natural heritage is conserved and preserved for future Mississippians.

Sincerely,

Andy Sanderson, Ecologist
Mississippi Natural Heritage Program
(601) 354-7303

The Mississippi Natural Heritage Program (MNHP) has compiled a database that is the most complete source of information about Mississippi's rare, threatened, and endangered plants, animals, and ecological communities. The quantity and quality of data collected by MNHP are dependent on the research and observations of many individuals and organizations. In many cases, this information is not the result of comprehensive or site-specific field surveys; most natural areas in Mississippi have not been thoroughly surveyed and new occurrences of plant and animal species are often discovered. Heritage reports summarize the existing information known to the MNHP at the time of the request and cannot always be considered a definitive statement on the presence, absence or condition of biological elements on a particular site.

The project is positioned immediately south of Jackson, Mississippi and is approximately 17 miles in length. MDOT is currently conducting preliminary engineering and environmental studies for the proposed project. Florence & Hutcheson (F&H) has been assigned to assist with these tasks.

The purpose of the project is to (1) improve roadway conditions throughout the reach of the project and (2) construct additional lanes from Terry Road to McDowell Road to relieve congestion for this portion of the interstate system. MDOT does not anticipate the acquisition of right-of-way for this project. Consideration will be given to utilizing the existing alignment with necessary attention given of potential impacts, future traffic volumes, constructability, and maintenance of traffic.

Please find attached maps of the proposed project location for your use in review of the project. If you have questions or concerns, please contact me at (615) 867-9400 or Mr. Chad Wallace of the Mississippi Department of Transportation at (601) 359-7920. You may also email your concerns to me at jfarmer@flohut.com or Mr. Wallace at rcwallace@mdot.state.ms.us.

Sincerely,

FLORENCE & HUTCHESON

Subject: FMS 106023-IM-0055-02(218) - Hinds County, MS

Mr. Wallace:

This e-mail is in response to correspondence from Florence & Hutcheson consultants with regard to the above project. I wanted to clarify a couple of points from the letter:

1. Although the total project limits would be I-55 from the Hinds/Copiah County line going north to the McDowell Road exit, it was my understanding that that portion that would have the additional lane in each direction would be the Terry exit (Exit #78) going to the northern limit of the project (McDowell Road). Your correspondence indicated to "Terry Road". Exit 78 is actually Cunningham Avenue (east of I-55) and Green Gable Road (west of I-55)
2. Will any consideration be given to upgrade the frontage roads south of Exit 78? The reason that I ask this is that about a year ago, the Town asked that we re-vamp our truck route through Town to include travel along the west frontage road south of I-55. MDOT indicated that their analysis indicated that the pavement thickness on the frontage road was insufficient. The Town and Board of Aldermen would rather we re-route our truck route off of the main street (Cunningham Avenue). In 2010, we were fortunate enough to have received funds to overlay our main east-west street, and by taking the truck traffic off our main street would both protect our investment and improve vehicular safety.
3. Will the section of I-55 through the corporate limits of Terry (which include Exits 81, 78) include interstate lighting as part of this project?

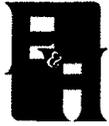

Please provide a response at your convenience. Let me know if you have any questions. Thank you.

Roderick T. Nicholson

RE: EPA Comments on the Draft Environmental Assessment (Draft EA) for Interstate 55
From the Copiah County Line South of Terry, MS to McDowell Road in Jackson, MS
Project Number: IM-0055-02 (218)

Dear Ms. Thurman:

The U.S. Environmental Protection Agency (EPA) has reviewed the subject draft Environmental Assessment (EA) pursuant to the National Environmental Policy Act (NEPA) and Section 309 of the Clean Air Act. The purpose of this letter is to provide you with EPA's comments regarding potential impacts of the proposed project.

The Mississippi Department of Transportation (MDOT) proposes to improve Interstate 55 from Copiah County Line south of Terry, MS to McDowell Road in Jackson, MS. The proposed project would involve: (1) replacing pavement from Copiah County Line south of Terry, MS to McDowell Road in Jackson, MS (17.1 miles); (2) adding one lane in each direction from Terry, MS (Green Gable Road, Cunningham Avenue) to Byram, MS (S. Siwell Rd.) for 6.3 miles; and (3) adding one lane in each direction from Byram, MS (S. Siwell Rd.) to Jackson, MS (McDowell Rd.) for 6.6 miles. All improvements are proposed within the existing interstate and frontage roads rights-of-way.

The purpose of the project is to improve the physical roadway conditions of I-55 from the Copiah County Line south of Terry, MS to McDowell Road in Jackson, MS within Hinds County and provide additional capacity for I-55 from Green Gable Road/Cunningham Avenue in order to relieve congestion of the interstate system and provide fluid and safe traffic control during the pavement replacement.

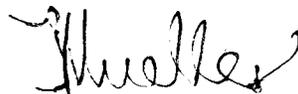

The alternatives considered include a No-Build Alternative (Alternative A) and two Build Alternatives (B and C). According to the Draft EA, Alternative A does not satisfy the purpose and need of the project. Of the two build alternatives, Alternative B involves additional property outside of MDOT's existing right-of-way while Alternative C utilizes MDOT's existing right-of-way. EPA notes that the Draft EA identifies Alternative C as the preferred alternative.

Based on the information provided in the Draft EA, EPA supports the selection of Alternative C as the environmentally preferable alternative. The preferred alternative does not

appear to represent a significant impact to human health and the environment since it constrains the project within the existing right-of-way. Constraining the project within MDOT's existing right-of-way minimizes the social, economic, and environmental impacts of the project while meeting the project purpose and need. In an effort to further reduce water resource and noise impacts, EPA is providing detailed comments for your consideration. Our detailed comments are enclosed.

We appreciate the opportunity to review and comment on the proposed action and look forward to reviewing the Final EA. If you have any questions about our comments, please contact Kenneth Dean at (404) 562-9378.

Sincerely,

A handwritten signature in black ink, appearing to read "Mueller". The signature is fluid and cursive, with a large initial "M" and a long, sweeping tail.

Heinz J. Mueller, Chief
NEPA Program Office
Office of Policy and Management

Enclosure

**EPA Review and Comments on
Draft Environmental Assessment (EA) for Interstate 55
From the Copiah County Line South of Terry, MS to McDowell Road in Jackson, MS
Project Number: IM-0055-02 (218)**

Stream Impacts: According to the Draft EA, 10,255 linear feet of streams are expected to be impacted by the proposed project due to stream alterations. It appears that these stream alterations are associated with the construction of the additional lanes and widening of the mainline bridges and culverts. EPA recommends that the Final EA discuss the stream alterations that will occur. EPA further recommends that any stream impacts be compensated with stream mitigation.

Water Quality Impacts: Page 48 of the Draft EA states, “The only impaired stream within the Pearl River Basin and also in Hinds County is Lynch Creek” It should be clarified that Lynch Creek is the only impaired stream in Hinds County still requiring a TMDL. According to EPA’s TMDL database, TMDLs have been established for Big Creek (MS159E), Rhodes Creek (MS161E), and Pearl River (MSUMPRLR1E), which are within the Pearl River Basin and also in Hinds County. These waterbodies are impaired, but they are not on the Section 303(d) List because TMDLs have been developed to address the impairments.

The Draft EA acknowledges “the recommended Sediment TMDL for waterbodies within the proposed project area.” It should be specifically noted that sediment TMDLs exist for Big Creek (MS159E), Rhodes Creek (MS161E), and Pearl River (MSUMPRLR1E). The Draft EA generally discusses benefits of best management practices (BMPs) and measures to be implemented during the construction phase of the proposed project to minimize water quality impacts. EPA recommends that MDOT analyze and provide information in the Final EA regarding the potential sediment loading due to the proposed project and the estimated reductions in sediment loads that might result from the implementation of BMPs.

Noise Impacts: The Draft EA states that at 163 facilities, traffic noise impacts are expected to occur in the design year (2031) if the proposed project is constructed. Based on model results, noise barriers are likely feasible and reasonable for only two (Area E and Area G) of the seven noise sensitive areas. EPA understands that a noise barrier may be considered in Area F since the cost per benefit is only slightly more than the maximum allowable for “reasonableness”. Since noise walls have been determined “not reasonable” for five of the seven noise sensitive areas, then other measures such as vegetative barriers and earthen berms should be considered to minimize impacts to sensitive receptors. EPA encourages MDOT to analyze the use of vegetative barriers and earthen berms and discuss their reasonableness and feasibility.

Subject: [EXTERNAL] Hinds 55: MVK-2012-1100

Tony,

The subject authorization is for a NW23 permit noted as expiring 11-5-2014. Would this project fall under the authorizations with expiration dates that actually extend until March 2017?

Thank you!

Andrea
