What is RIDES?

Roadways Into Developing Elementary Students is a math and science based curriculum for kindergarten through eighth grade students. The Mississippi Department of Transportation developed the hands-on transportation education program to introduce students to transportation careers. Lesson plans and a trunk of materials are provided to teach students about:

- Transportation, energy, safety, the environment, litter and pollution.
- Curriculum provided meets core standards of math and science required by the state.
- Lesson plans also integrate art, music and reading.

Showcase Your School!

The Mississippi Department of Transportation (MDOT) wants to showcase you by hosting a RIDES Media Blitz! MDOT wants the state to know how teachers are implementing the RIDES program into their classrooms. RIDES meets the core standards for the state of MS and offers students hands-on learning activities.

MDOT will choose multiple schools across the state host a Media Blitz that will showcase teachers who are actively using the RIDES program. Media will be invited to attend each blitz and will have an opportunity to interview students and teachers, and to see how students are participating in the program. By showcasing how RIDES is being used, we hope to generate more interest among teachers and show every person in the state how MDOT is directly influencing the education of students in MS.

If you are actively incorporating RIDES into your classroom and would be interested in hosting a RIDES Media Blitz and showcasing your students using RIDES, please contact: rides@mdot.state.ms.us
