1. For signing, flashing arrow panel, and drum spacing, see typical traffic control plans on sheets TCP-2, TCP-3, TCP-4, and TCP-5, as appropriate.

2. If no adequate acceleration lane exists for the temporary entrance, the yield sign (R1-2) and the yield ahead sign (W3-2A) shall be replaced with a stop sign (R1-1) and a stop ahead sign (W3-1A) on each side of approach. Where stop signs are used, a temporary stop line should be placed across the ramp at the desired stop location. If insufficient gaps are available in the traffic stream, consideration should be given to closing the ramp.

3. Determine taper layouts using the following equations:

   \[ L = \frac{W \times S}{30} \text{ for speeds of 45 mph or greater} \]
   \[ L = \frac{W \times S^2}{60} \text{ for speeds of 40 mph or less} \]

   Where:
   - \( L \) = minimum length of taper in feet
   - \( W \) = width of offset in feet
   - \( S \) = design speed or 85th percentile speed in miles per hour.

4. All traffic control items shown on this sheet will not be measured for separate payment. This work is to be included in the price bid for maintenance of traffic.
