1. Values for "A", "B", "C", and "D" will be shown elsewhere on the plans.

2. For details pertinent to installation of the terminal section, see manufacturer’s specifications and drawings or elsewhere on plans.

3. Guardrail sections are to be lapped in the direction of traffic approaching the bridge.

4. The overall length of guardrail is measured from the connecting end on the bridge.

5. The shoulder width at the bridge end shall be sufficient to provide a minimum of 600 mm behind the back of post before the shoulder breaks down.

6. Type, details, and limits of guardrail bridge end section will be shown elsewhere on the plans.

General Notes:

All dimensions are in millimeters (mm) except where noted.
