RE: Profile Thermoplastic Pavement Markings

In order to better evaluate the profile thermoplastic pavement markings, select one asphalt paving project to be let in the near future in your District as a candidate for this type pavement marking. To the extent possible selection of a multilane project would be best for the evaluation of the above product. Should a multilane project not be available, a project on a highway with a traffic count in excess of 2000 ADT would be acceptable.

Please furnish this Division with the project you select as soon as possible.

Please advise, if this office can be of further assistance.
