RE: Silt Basins on Roadway Design Plans

Silt basins will be shown on plans at all cross-drains where practical. When on Field Inspections or during Office Review, it is O.K. to remove any or all of the silt basins from the plans, but only if the entire group is convinced of the fact. If the Roadway Design representative does not agree with the others about removing the silt basins, then the silt basins will remain on the plans. The District or others can still request them to be removed by sending a letter to the Roadway Design Division Engineer.

I have asked Vernon and Micheal V. to attend at least one Field Inspection in each District. Tomorrow, they are going to District 7.
