**Subject:** Drainage Courses

The following decision has been made regarding our drainage courses under HMA pavement:

For the next several months, as we evaluate new pavement designs, we will require the following material for drainage courses under HMA pavement on the new construction of 4-lane routes:

907-306-3 4" Asphalt Drainage Course (By SY)

This is the same material placed under concrete pavement in the past.

Any plans that are not printed should be changed at this time.

In regards to plans that have been printed, Construction Division will advise which plans should be changed on a project by project basis. This process will last over the next few months until a price can be established for this material. At that point, we will decide on a "permanent" basis which material (or alternates) will be required.

This will be discussed in our next staff meeting.

Keith Purvis  
Assistant Roadway Design Division Engineer
