

MISSISSIPPI DEPARTMENT OF TRANSPORTATION
Inter-Departmental Memorandum

TO: Squad Leaders

DATE: March 2, 2001

FROM: Steven W. Reeves
Quality Control Engineer

SUBJECT OR PROJECT NO: SS-2 Quantity Program

INFORMATION COPY TO:

COUNTY:

Roadway Design Division Engineer (Pickering)
Assistant Roadway Design Division Engineer (Purvis)
Special Projects Engineer (Boteler)
Section Engineers

The SS-2 program used to calculate the concrete and reinforcing steel in an SS-2 inlet has been revised. The new Standard Drawing, SS-2, has the height of inlet, H, shown from the top of curb to the bottom of the bottom slab. The existing program was set up for the "H" dimension to be measured to the invert. The "H" dimension shown on plans should match the "H" shown on the Standard Drawing.

Mr. John Ward will place the new program on all RWD machines. When you use this program check for Version 5.1 dated February 28, 2001. If you do not have this version, contact Mr. Ward and he will supply a copy for you.

If you have any problem running this program, please contact either Mr. Ward or Mr. Reeves at the Roadway Design Division.

If you have any questions, please advise.
