Subject: RS-1 (Standard) and RS-1 (Special Design Sheet, Rumble Stripe)

It has been pointed out by one of our designers that we have two RS-1's.....one is a standard drawing for "PROTECTIVE DEVICE FOR RAILROAD SIGNAL", and the other being the special design sheet for rumble stripes that we are all familiar with.

On future plans, change Rumble Stripe to RSD-1, for rumble stripe detail. I see no reason to issue any revisions on printed plans unless both of these sheets are showing up in any plans. Also, design team leaders please make your squad team members aware of the change and section engineers make any active consultants aware of the change.

Thank you,

Russell Sutterfield, PE
